## Supplementary Materials

**Table S1:** Spatial correlation coefficients between the changes in the forecast skill ( $\Delta\rho$ ) and changes in the forecast properties ( $\Delta\sigma_{EM}^2$ ,  $\Delta\sigma_{ES}^2$ ,  $\Delta STN$ ,  $\Delta\rho_{perf}$ ) for T2M in the relaxation experiments.

	TROP				STRAT			
	$\Delta\sigma_{EM}^2$	$\Delta\sigma_{ES}^2$	$\Delta STN$	$\Delta\rho_{perf}$	$\Delta\sigma_{EM}^2$	$\Delta\sigma_{ES}^2$	$\Delta STN$	$\Delta\rho_{perf}$
Weeks 1-2	-0.03	-0.05	0.25	0.42	0.04	-0.09	-0.03	0.01
Weeks 3-4	0.10	-0.06	0.44	0.51	0.29	-0.15	0.16	0.28
Weeks 5-6	0.03	-0.23	0.34	0.36	0.14	0.00	0.08	0.16

**Table S2:** Spatial correlation coefficients between the changes in the forecast skill ( $\Delta\rho$ ) and changes in the forecast properties ( $\Delta\sigma_{EM}^2$ ,  $\Delta\sigma_{ES}^2$ ,  $\Delta STN$ ,  $\Delta\rho_{perf}$ ) for TP in the relaxation experiments.

	TROP				STRAT			
	$\Delta\sigma_{EM}^2$	$\Delta\sigma_{ES}^2$	$\Delta STN$	$\Delta\rho_{perf}$	$\Delta\sigma_{EM}^2$	$\Delta\sigma_{ES}^2$	$\Delta STN$	$\Delta\rho_{perf}$
Weeks 1-2	0.06	-0.12	0.15	0.13	0.01	-0.03	0.02	0.04
Weeks 3-4	0.26	-0.26	0.33	0.34	0.02	0.02	0.07	0.07
Weeks 5-6	0.33	-0.22	0.39	0.40	0.08	-0.08	0.14	0.15

**Figure S1:** Signal to noise ratio (STN) for bi-weekly mean T2M anomalies for (left) CTRL; and the differences between  $\rho$  in (center) TROP and (right) STRAT experiments with respect to CTRL. Stippling in (center, right) indicates significant differences between CTRL and the respective relaxation experiments.

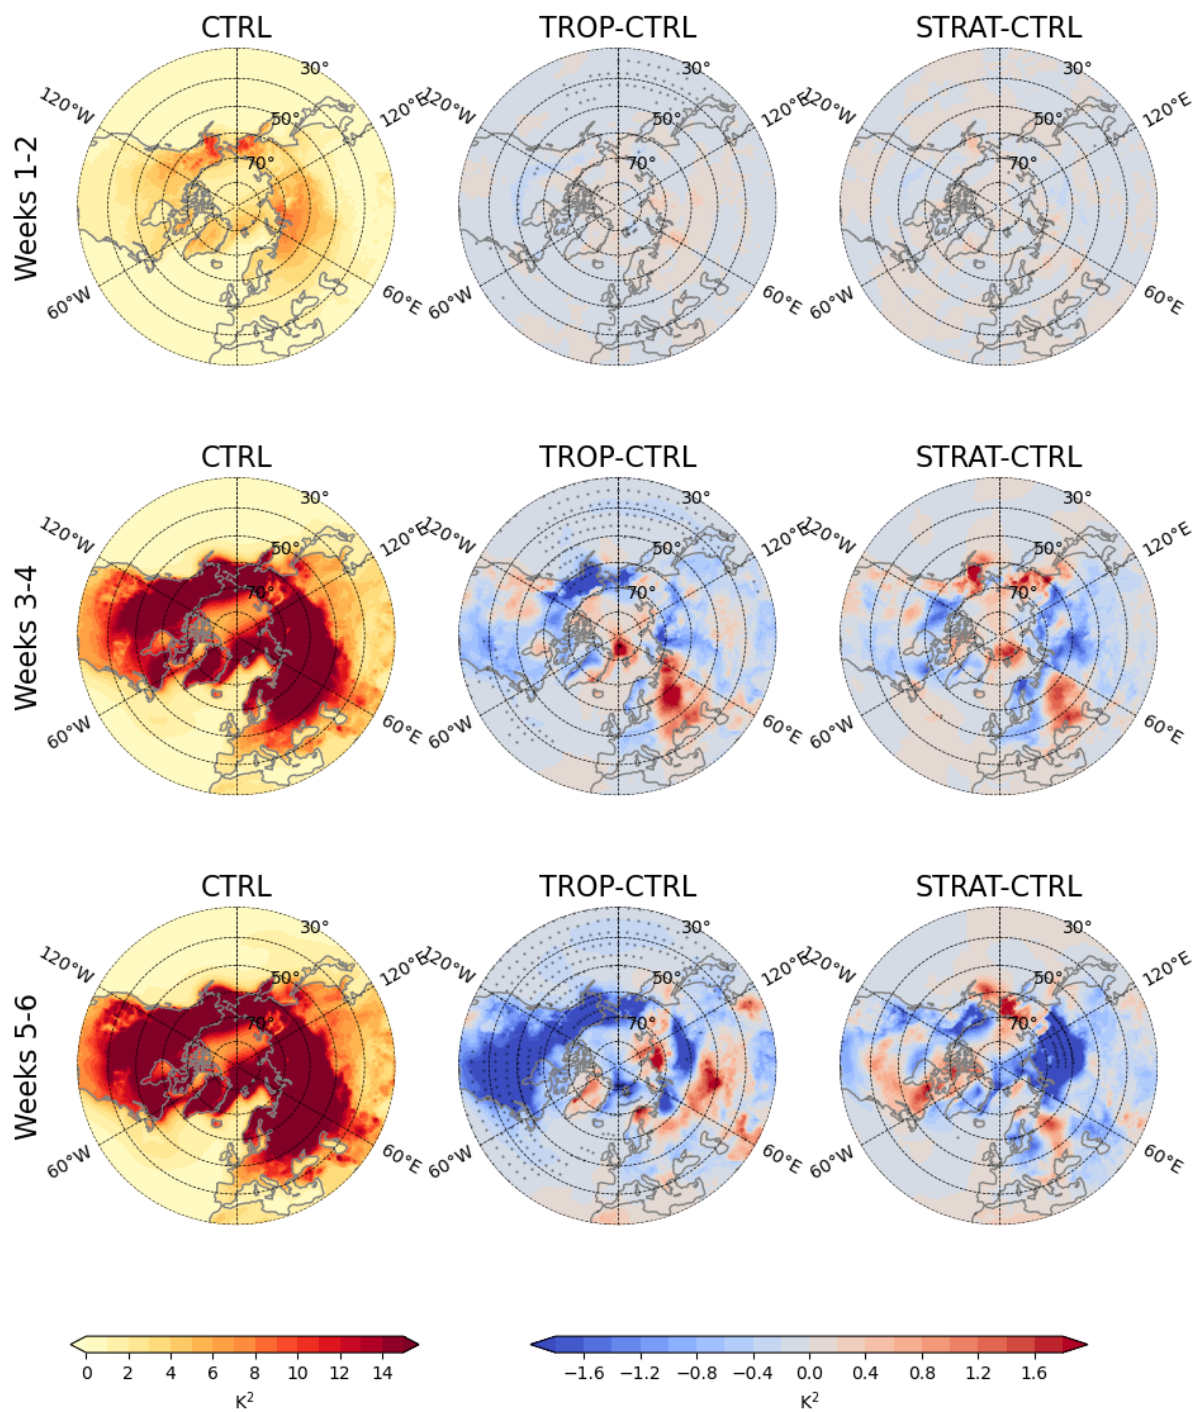

**Figure S2:** Scatterplots between  $\rho$  and  $\rho_{perf}$  for T2M anomalies at each grid point between 30°N and 90°N. 2nd and 3<sup>rd</sup> columns show differences for  $\rho$  and  $\rho_{perf}$  between relaxation experiments (TROP and STRAT respectively) and CTRL.  $r$ -values show spatial correlation coefficients between  $\rho$  and  $\rho_{perf}$  fields. Red dots mark grid points south of 40°N, blue dots mark grid points north of 60°N, and grey dots mark grid points between 40°N-60°N.

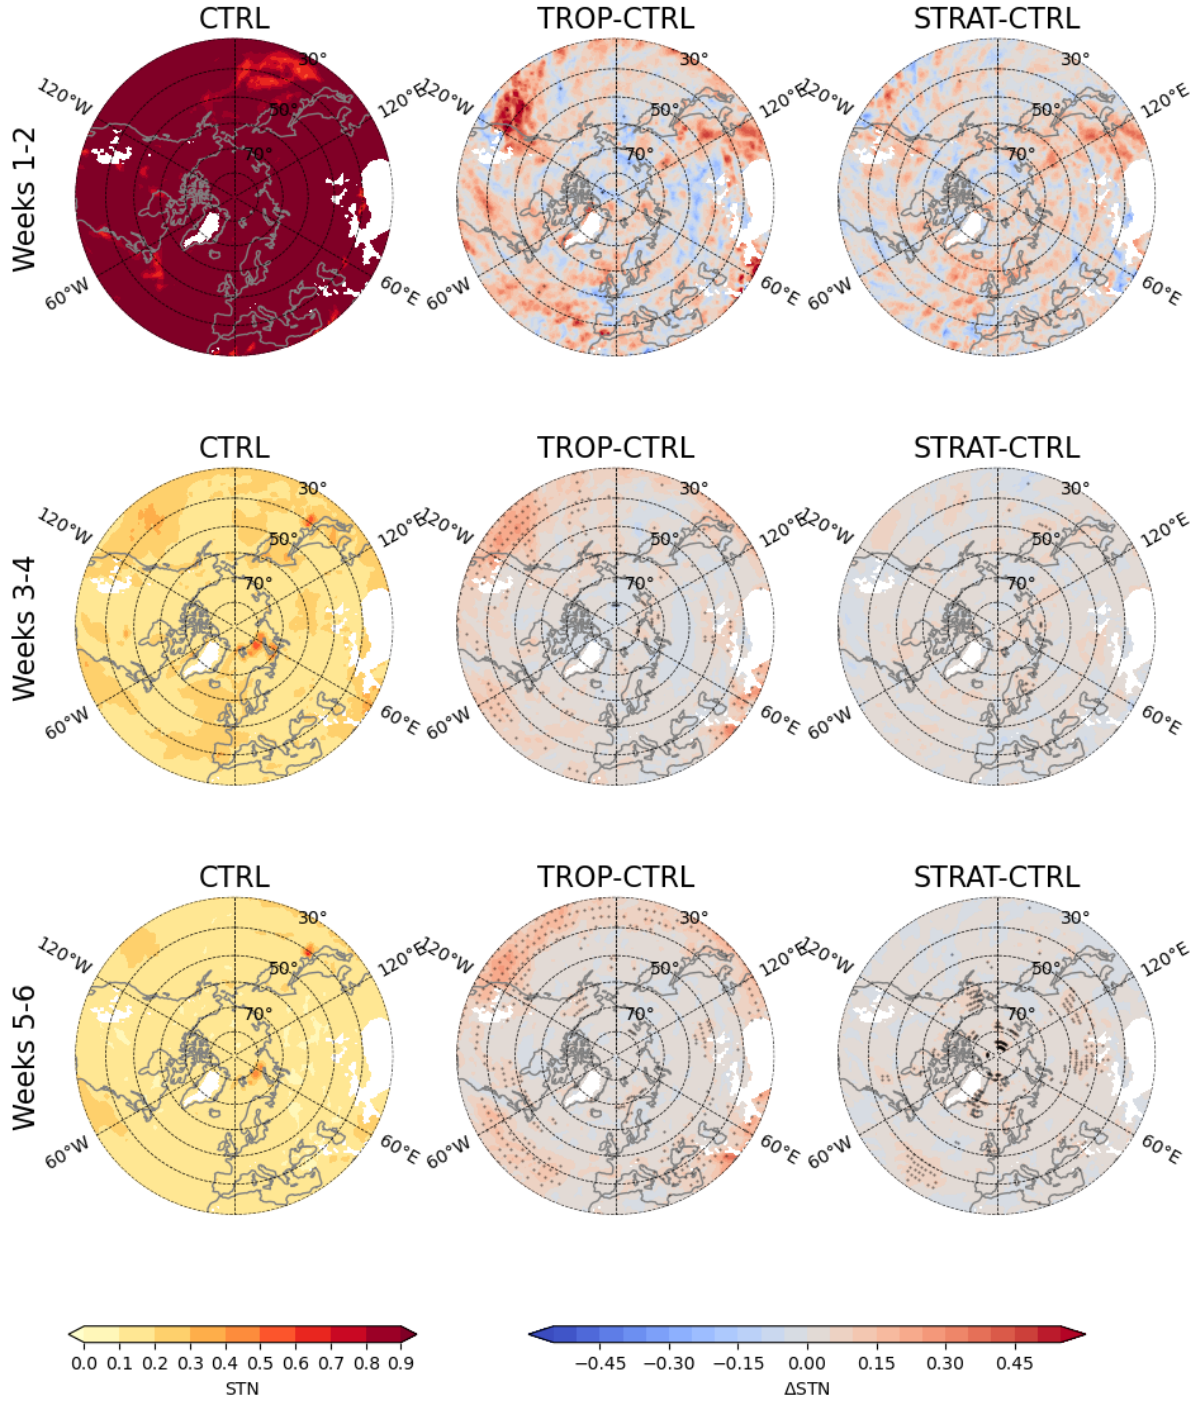

**Figure S3:** Variability of ensemble mean ( $\sigma_{EM}^2$ ) for bi-weekly mean T2M anomalies for (left) CTRL; and the differences between  $\sigma_{EM}^2$  in (center) TROP and (right) STRAT experiments with respect to CTRL. Stippling in (center, right) indicates significant differences between CTRL and the respective relaxation experiments.

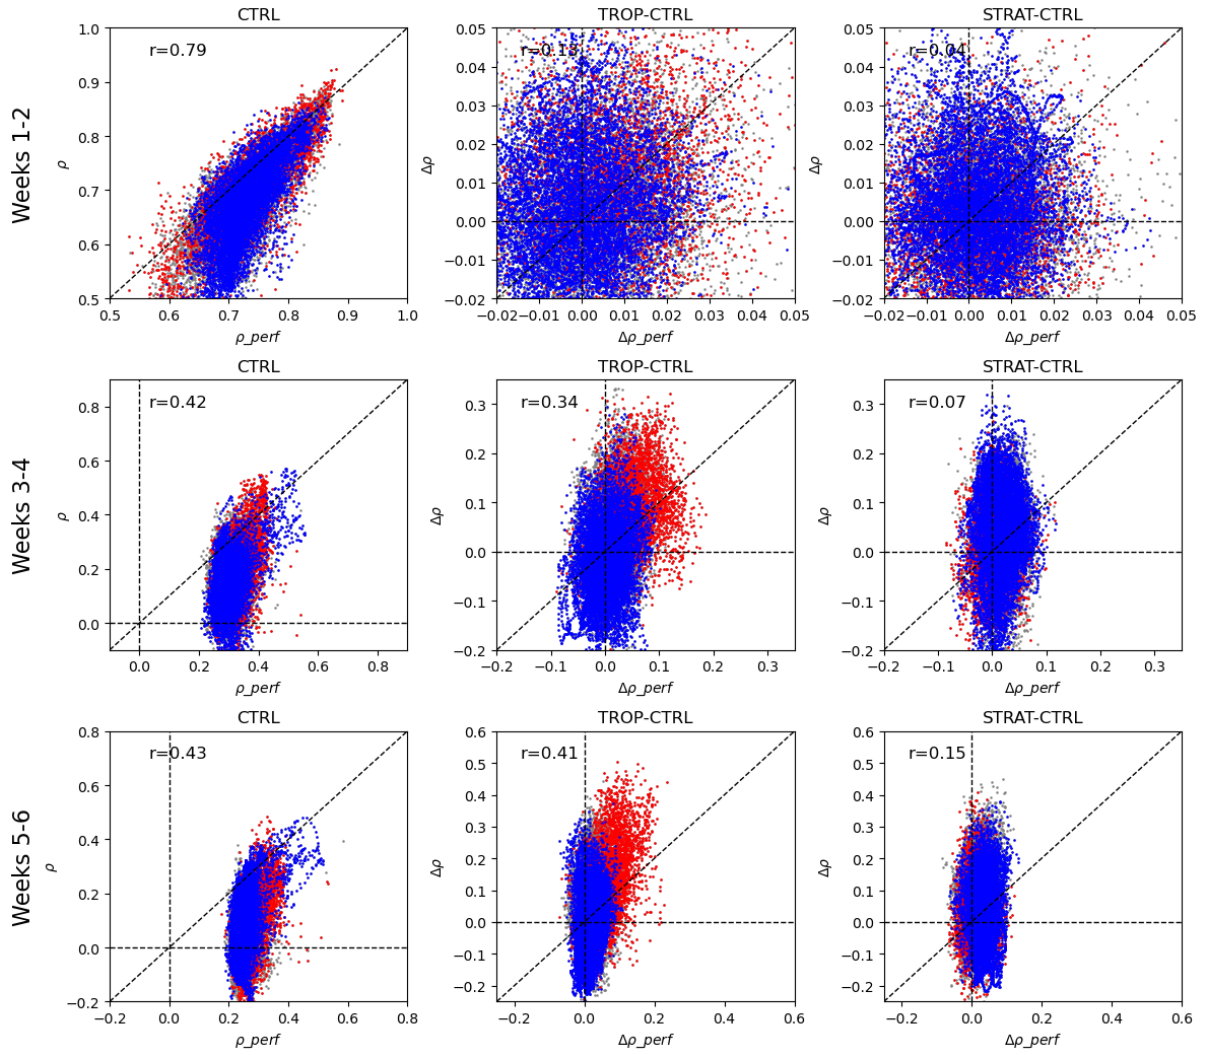

**Figure S4:** Ensemble spread ( $\sigma_{ES}^2$ ) for bi-weekly mean T2M anomalies for (left) CTRL; and the differences between  $\sigma_{ES}^2$  in (center) TROP and (right) STRAT experiments with respect to CTRL. Stippling in (center, right) indicates significant differences between CTRL and the respective relaxation experiments.

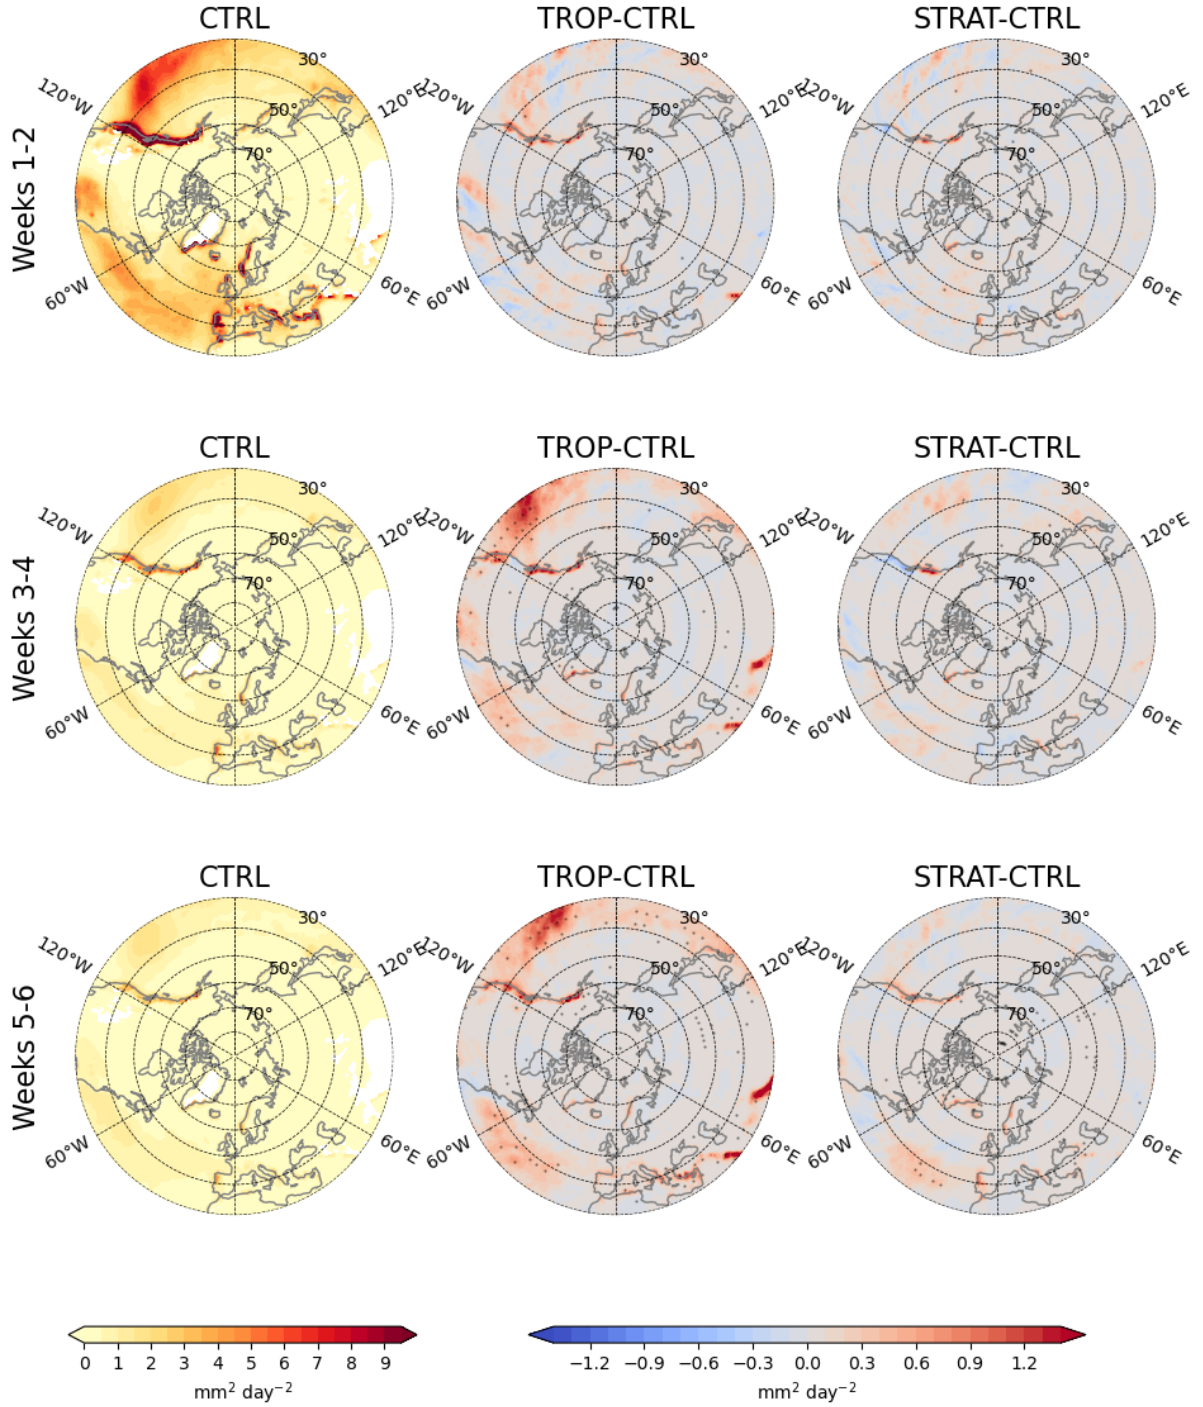

**Figure S5:** Signal to noise ratio (STN) for bi-weekly mean TP anomalies for (left) CTRL; and the differences between  $p$  in (center) TROP and (right) STRAT experiments with respect to CTRL. Stippling in (center, right) indicates significant differences between CTRL and the respective relaxation experiments.

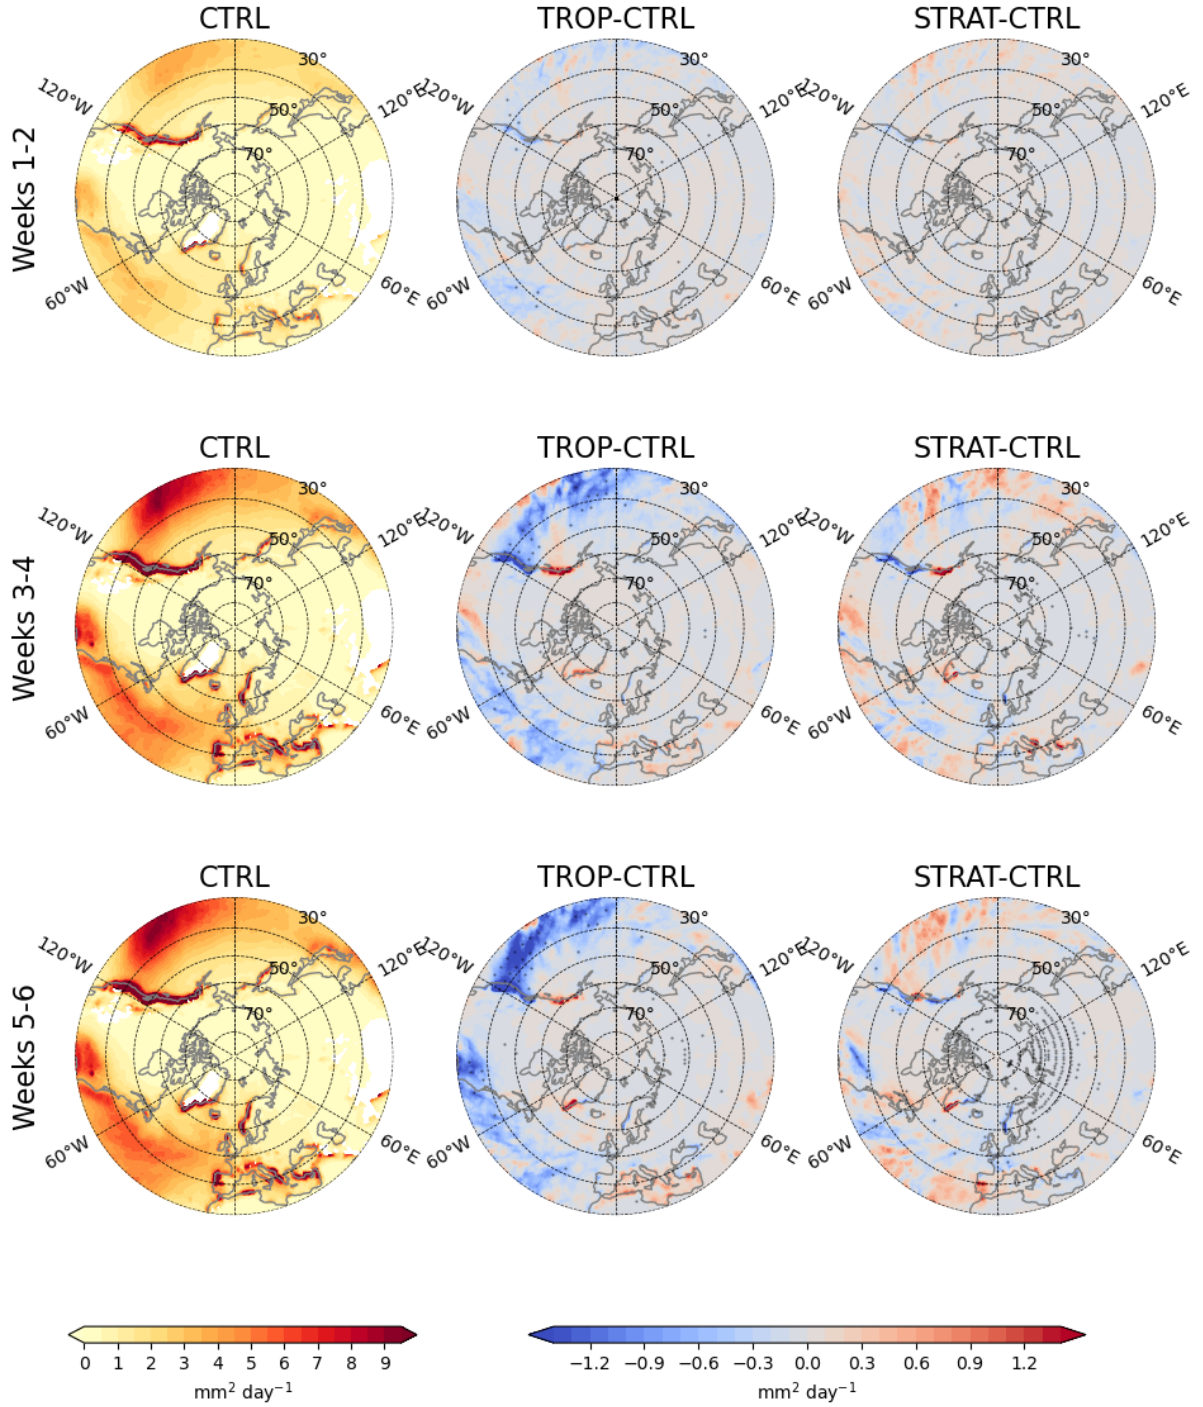

**Figure S6:** Scatterplots between  $\rho$  and  $\rho_{perf}$  for TP anomalies at each grid point between 30°N and 90°N. 2nd and 3<sup>rd</sup> columns show differences for  $\rho$  and  $\rho_{perf}$  between relaxation experiments (TROP and STRAT respectively) and CTRL.  $r$ -values show spatial correlation coefficients between  $\rho$  and  $\rho_{perf}$  fields. Red dots mark grid points south of 40°N, blue dots mark grid points north of 60°N, and grey dots mark grid points between 40°N-60°N.

**Figure S7:** Variability of ensemble mean ( $\sigma_{EM}^2$ ) for bi-weekly mean TP anomalies for (left) CTRL; and the differences between  $\sigma_{EM}^2$  in (center) TROP and (right) STRAT experiments with respect to CTRL. Stippling in (center, right) indicates significant differences between CTRL and the respective relaxation experiments.

**Figure S8:** Ensemble spread ( $\sigma_{ES}^2$ ) for bi-weekly mean TP anomalies for (left) CTRL; and the differences between  $\sigma_{ES}^2$  in (center) TROP and (right) STRAT experiments with respect to CTRL. Stippling in (center, right) indicates significant differences between CTRL and the respective relaxation experiments.
