Dear Editor,

We appreciate your comments on the data description, which are an essential part of scientific communication.

In the supplementary tables, we added clear descriptions specifying that the values are presented as mean (SEM), ensuring full consistency with the main text.

We also updated all figure captions, both in the main manuscript and in the supplementary materials to explicitly state that all error bars represent the standard error of the mean (SEM).

Finally, following the instructions from the editorial office, we have reformatted all references to comply with the SOIL journal style.

We appreciate again for the opportunity to revise our work.

Warm regards,

Kyungmin Kim (on behalf of all co-authors)
