Response to comments from co-editor

I think the authors have done a very thorough job to address the many valid comments of the two reviewers and the paper is much improved now. I have only a few minor technical points that need to be addressed:

We thank the co-editor for the careful review of our revised manuscript and for the constructive feedback. Our point-by-point responses to the review comments are provided below.

1) In the abstract you introduce ENSO and IOD now without defining the acronyms.
    Thank you for pointing this out. The expanded forms of ENSO and IOD have been added to the abstract in the revised version.

2) L586 says Figures S4 and S4. Please correct!
    Thank you, corrected in the revised version.

3) L588: use commas for relative clause to improve readability.
    Done.

4) L635: Which length?
    It is seasonal length, corrected in the revised version.
