

Manuscript Number: egusphere-2025-3054

Title: *"Early Identification of Reservoir-Bank Landslides in Deeply Incised Mountain Canyon Areas with Interferometric Baseline Optimization."*

Dear Editor,

Thank you for notifying us that our manuscript has been accepted for publication. We also sincerely appreciate the time and valuable comments provided by you and the reviewers during the review process; your professional guidance has significantly improved the quality of our paper. In accordance with the journal's requirements, we are uploading the final files and provide the following response.

The manuscript has been thoroughly revised point by point according to all reviewers' comments during the previous major revision round. Since receiving the acceptance notification, we have made the following additional adjustments based on the supplementary requests in your email. No further changes have been made to the content of the manuscript.

【Request for adding a co-corresponding author】

We would like to respectfully request adding **Wenyu HONG** as a co-corresponding author. Initially, we mistakenly thought that the journal allowed only one corresponding author. After re-checking the journal's policy and discussing with all co-authors, we confirm that **Wenfei XI** and **Wenyu HONG** have made equal and substantial contributions to this work, including conceptualization, data analysis, and manuscript preparation. Therefore, we hope to designate both as co-corresponding authors. We sincerely apologize for any inconvenience this may cause.

Final confirmations:

1. Line numbers: Line numbers have been added to pages 1 and 2 of the manuscript as requested (line numbers on the remaining pages remain unchanged).

2. Author name format: All authors have been listed in the format "first name + family name" as requested. The revised list is: Wenfei XI, Wenyu HONG, Zhiquan YANG, Guangcai HUANG, Junqi GUO, Kunwu YANG, Tingting JIN. The title page and the author list throughout the manuscript have been updated accordingly. References still follow the initial-based style.

3. Copyright attribution for Figures 6 and 7: We have checked Figures 6 and 7. Since we are not the original creators of these images, we have added appropriate attribution/copyright statements in the figure captions (including the source and license information for satellite/drone/aerial imagery). All necessary details have been included.

4.Co-author approval: All co-authors have reviewed and approved the final manuscript.

5.Reproduction rights for figures: The reproduction rights for all figures have been secured.

6. Maps and aerial imagery: Required copyright statements or credits have been included as requested.

7. Data, code, and video abstract: The relevant datasets and code have been deposited in reliable public repositories and assigned DOIs, which are properly cited in the Data Availability section and the reference list of the manuscript. No video abstract was produced for this study.

8. Text and formula details: The text, formulas, and other detailed aspects of the manuscript have been carefully checked to ensure accuracy.

9. DOI for references: For a few Chinese references, we have conducted careful searches through platforms including Chinadoi, Wanfang Data, CNKI, and Crossref, and confirmed that these references have indeed not been assigned DOIs. Therefore, in accordance with academic practice, we have provided complete bibliographic information without adding DOI links.

Thank you again for handling our manuscript and for your support and understanding throughout the review and publication process. Please do not hesitate to contact us if any further information is required.

Corresponding author: Wenfei Xi (on behalf of all authors)
