

Report of minor revisions

Dear Editors and Reviewers,

We would like to point out the minor changes made during the latest round of revisions:

- we have added the word “often” in line 42.
- some minor improvements were done to the relative positioning of some figure elements without changing the figure contents (minor shifting of figure elements by few millimeters at max to improve alignment of figure elements).
- some duplicate spaces were deleted.
- the order of Sections at the end of the manuscript was adjusted to follow the manuscript composition as specified on the respective website: the appendices have been placed directly after the conclusions. This resulted in the manuscript being 35 pages long instead of 34.

Kind regards,
Friedrich Carl and co-authors
