

Dear Editor,

flood defence information is confidential but can be shared by JBA for non-commercial research through dedicated agreements. In our last revision, we also inserted a reference to the Flopros dataset to offer readers a fully open-access alternative. We have now submitted a new manuscript version with a clearer statement of data availability:

*“The code for Global Sensitivity Analysis is available at: <https://safetoolbox.github.io/>. JBA Risk Management’s flood **model and underpinning datasets, which include hazard maps, defence information, event sets, vulnerability curves and exposure information**, are made available to users **under commercial licensing and through collaboration agreements for non-commercial research**. Requests for discussion on access to the model and data presented in this paper can be directed to: hello@jbarisk.com. ...”*

We hope this addresses your last comment!

Best regards
Francesca
