Dear Rodrigo,

In reference to your question regarding FireCCI51 versions, the FireCCI51 dataset existing in the CCI website (<https://climate.esa.int/en/projects/fire/data/>) is equivalent to the FireCCI v5.1.1cds existing in the CDS (<https://cds.climate.copernicus.eu/datasets/satellite-fire-burned-area>). When a small error was noticed in 2020 regarding some files in October to December 2019, the files were directly replaced in CCI using the same version (with a note inside the download folder to inform this), while in CDS it was necessary to replace the whole dataset with a new version 5.1.1cds. The FireCCI51 from CCI was used to compute the FRY2.0 dataset, so you are in fact using the current dataset.

Thank you for pointing out the discrepancy; we will add a note to the CDS to make it clear that the contents of both datasets are equivalent, because it is indeed a bit confusing.

Best regards,

M. Lucrecia Pettinari
