

Line 366 "at all two locations" --> at two locations

Line 516-519

"Focusing on Milford Haven, where the strongest meteotsunami signal was captured by the system, we find that the timing and duration of the event is successfully captured by the ensemble with one-day lead time (Fig. 19- top) with almost 89% of the members capturing even higher maximum amplitude signal than the observations ($>0.4\text{m}$) and all members capturing the minimum threshold of meteotsunami amplitude of 0.2m ."

Capturing "even higher" does not make it good. This means that it can also forecast false positives.

Line 592 is still not corrected.

Please write where it is not sent back. "to the" is missing before atmosphere.

Figure 8. caption is still not well written.

Write "Colours of the stars indicate... "

In **Fig. A1** legend is now added but write min instead of "mn". Check this throughout the manuscript.
