

# Response to Technical Corrections regarding Manuscript Composition

Journal: Biogeosciences

Manuscript ID: EGUSPHERE-2025-4102

Title: Multi-scale dynamics of carbon dioxide flux and its environmental drivers in the Pantanal wetland

Authors: Tarcis A. O. dos Santos et al.

December 8, 2025

---

Dear Production Team,

We thank you for the technical evaluation of our accepted manuscript. We have addressed the issue reported regarding the manuscript composition. Specifically, we corrected a referencing error where the study area map (Figure 1) was incorrectly labeled as an appendix figure. Additionally, we took this opportunity to correct a typo found within the map itself.

Below, we provide the point-by-point response detailing the corrections made in the final version of the manuscript.

## Point-by-Point Response to Technical Corrections

1. **Issue Reported:** "Some sections, tables or figures are misplaced. Please pay attention to a manuscript composition."

**Our Response:** We identified a citation error in **Section 2** (Material and Methods), specifically in the description of the study site. The reference to the map of the study area (**Figure 1**) was incorrectly written as "Figure A1" (referring to the Appendix). We have corrected this label to point to the main text Figure 1.

Furthermore, we corrected a spelling error within Figure 1, where the word "flooded" was previously misspelled as "fooded". The revised figure has been uploaded.

## List of Relevant Changes in the Manuscript

1. **Corrections in Figure 1 (Study Area Map):**

- **Reference Label:** Corrected the text citation in Section 2 from "Figure A1" to "**Figure 1**" to properly reference the map in the main text.
- **Typo Correction:** Corrected the spelling of the word "flooded" (previously "fooded") inside the map image.

2. **Manuscript Composition Check:**

- Verified the placement of Figure 1 and other figures to ensure they appear close to their first citation, adhering to the journal's composition guidelines.

Sincerely,

Tarcis A. O. dos Santos  
*On behalf of all co-authors.*
