Anonymous Referee #2, 12 Mar 2026 reply

Referee-report comments on “Sea-surface temperature variability and climate drivers in Cuba’s Jardines de la Reina National Park (2003–2022)” by Castillo-Alvarez et al.

I appreciate the authors’ efforts to address my comments, and I am satisfied with their responses. I think the paper should be published, and I only have a few very minor corrections:

L225: Delete “it” in “...ML base it is calculated...”

L239: Missing superscripts and subscripts for “ $\Delta\sigma_\theta = 0.03 \text{ kg m}^{-3}$ ”

L254-259: Should “Fmax” be written as “ F_{\max} ”?

R: All suggested corrections have been carefully addressed. Additionally, a thorough and detailed revision of the manuscript was carried out, during which further minor issues were identified and corrected. All changes have been clearly indicated in the revised manuscript using track changes.
