

Review

The authors have addressed the necessary review comments, and the paper is, from my point of view, ready for publication. Nevertheless, it would clearly benefit from including a major reference that is currently missing in the context of catalogue-based PSHA for Europe: the ESHM20 model (Danciu et al., 2021), which is furthermore used in the second generation of Eurocode 8 for reference hazard values (Labbé and Paolucci, 2021; Paolucci et al., 2021).
