

Dear Editor,

We hereby submit a revision request for the final proof copy and kindly request your review and approval.

We request that the chemical symbol “·OH” on page 8, line 27 in the manuscript, be corrected to “·Cl.” This correction is critical for the following reasons:

This study aims to elucidate chlorine radical-initiated atmospheric oxidation of imines. Due to an error, the reference to the ·Cl was mistakenly written as ·OH. This symbol error could confuse readers and lead to misunderstandings of the core findings of the study. Therefore, this correction request addresses only the textual error and does not involve any changes to the calculated data, results, or overall conclusions.

We therefore respectfully request approval of this correction. We sincerely appreciate your understanding and support.

Hong-bin Xie
