

Dear Antje Voelker,

Thank you very much for your corrections.

The location of the U1389 core was corrected in Fig. 1. We deleted all references to Heinrich events in the text, and rather referred to Heinrich stadial or layer accordingly. The references to D-O like events during MIS 6 in the introduction were also changed to “millennial-scale climatic oscillations”. The uploaded file now contains the Data availability statement (I don’t know why it did not appear on the previous submitted file..). We also addressed all the language corrections that you suggested.

You can see all the changes made in the track-changes file.

Sincerely,

Liz Charton
