**Figure S1: Diurnal variations of the chemical compositions of NR-PM<sub>2.5</sub> (Org, SO<sub>4</sub>, NO<sub>3</sub>, NH<sub>4</sub>, Chl) and gaseous species (SO<sub>2</sub>, CO, O<sub>3</sub>, NO<sub>x</sub>) during P1 and P2, respectively. The circles indicate the mean values, and the shaded areas represent the 75<sup>th</sup> and 25<sup>th</sup> percentiles.**

**Figure S2: Average mass spectrum of Vocus PTR-MS during P1 (upper panel) and P2 (lower panel). The pie charts refer to the mass contributions of different categories.**

**Figure S3: Potential source contribution function of NR-PM<sub>2.5</sub> compositions and OA factors during this campaign in Ningxia. The color scales indicate the values of PSCEF. The city marked as a solid circle in each panel is Yinchuan (YL), and hollow circles refer to Xi'an (XA), Lanzhou (LZ), Xining (XN), Taiyuan (TY), WH (Wuhai), Yulin (YL), Eerdos (EEDS) and Hohhot (HHHT).**
