

Explanatory document

I am requesting to change the following type mistakes within the manuscript titled “Investigating firn structure and density in the accumulation area of the Grosser Aletschgletscher using ground-penetrating radar” before publishing it.

- Subsection: 2.2.2 Glaciological investigations, Page 4, lines 10 and 11, here, the cylinder length should be 14 cm instead of 17 cm, which resulted in a vertical resolution of 14 cm.
- Subsection: 3.2. GPR CMP Semblance analysis, Page 6, line 42, here, assumed radar wave propagation velocity in air should be 0.167 m per s instead of 0.17 m per s.

Note: Mentioned page and line numbers are from the typesetting manuscript version 4.
