

**Author's Response for Modelling the Impacts of Historical and Future Extreme
Precipitation Days on Seasonal Surface Mass Balance in the Eastern Canadian Arctic
and Greenland**

Thank you to the editor and anonymous reviewers for their feedback during the review process and support in publishing the manuscript. The files uploaded match the previous version, except that the tick labels for the colourbars for panels (c) and (d) of figures 9-11 have been adjusted slightly to align with the breaks in the colormap used in the figure.
