RE: EGUSPHERE-2025-4576: Thorough checks before typesetting

The Editorial Support Team
Copernicus Publications

Dear Editorial Team,

In the email to inform me of our manuscript “Application of flux footprint equations from Kljun et al. (2015) to field eddy-covariance systems for footprint characteristics into flux network datasets” accepted for final publication, I was advised to “make sure that all co-authors thoroughly check the final text file prior to uploading all files before these files are proceed to typesetting”. I emailed all co-authors to request their thorough checks.

While reading throughout the manuscript, the first author, Dr. Xinhua Zhou, checked derivations of 48 equations in main text and 24 equations in appendices and verified all data in tables, figures, and program. Fortunately, he could not find any error in equations and data. Unfortunately, typos, inconsistency in English expression and gramma convention, and irregularity in format still can be found by our coauthors although raelly. Based on the feedback from our authors, we corrected a couple of typos, adjusted inconsistencies in English expression and gramma convention, and edited format in compliance with current EGU journal standard. See two files ready for typesetting below:

1. Word file without a change tracker: [egusphere-2025-4576-manuscript-version6](#)
2. Word file with change trackers: [egusphere-2025-4576-manuscript-version6_trackers](#)

For typesetting of publication, four original figure files are also provided below:

1. PDF file: [egusphere-2025-4576-Fig1-version6](#)
2. SigmaPlot file: [egusphere-2025-4576-Fig2-version6](#)
3. PDF file: [egusphere-2025-4576-Fig3-version6](#)
4. SigmaPlot file: [egusphere-2025-4576-Fig4-version6](#)

We have these files in other formats (e.g., PNG), too. Let me know if these figure files in different format are preferred.

Thank you very much for your full support in the publication process of our manuscript.

Sincerely,

Zhi Chen, Ph.D.
