## Contents of this file

The supplementary material includes Table S1 and Figs. S1 to S13 that support the main manuscript.

**Table S1:** The information of interferograms obtained from ERS-2, Envisat, ALOS-1, and ALOS-2.

**Figure S1:** Multispectral unmanned aerial vehicle (UAV) survey of surface conditions around the mining area.

**Figure S2:** Sentinel-1 interferogram network and average spatial coherence.

**Figure S3:** Cumulative distribution function matching between Sentinel-1 and ALOS-2 deformation rates.

**Figure S4:** Comparison between actual observed thaw-season deformation and thaw-season deformation scaled using the thawing index.

**Figure S5:** Time series of streamflow recession time constant and model goodness-of-fit obtained using 1-year fitting, 3-year moving-window fitting, and 5-year moving-window fitting.

**Figure S6:** The coherence maps of the interferograms from ALOS-1.

**Figure S7:** The coherence maps of the interferograms from ALOS-2.

**Figure S8:** Time series of cumulative surface deformation from 2016 to 2023.

**Figure S9:** Comparison between Sentinel-1 InSAR deformation time series and GNSS-IR (GNSS Interferometric Reflectometry) measurements at the Yakou station during the snow-free period in 2018.

**Figure S10:** Deformation trend and thaw season deformation around the open-pit mine in the western part of the study area.

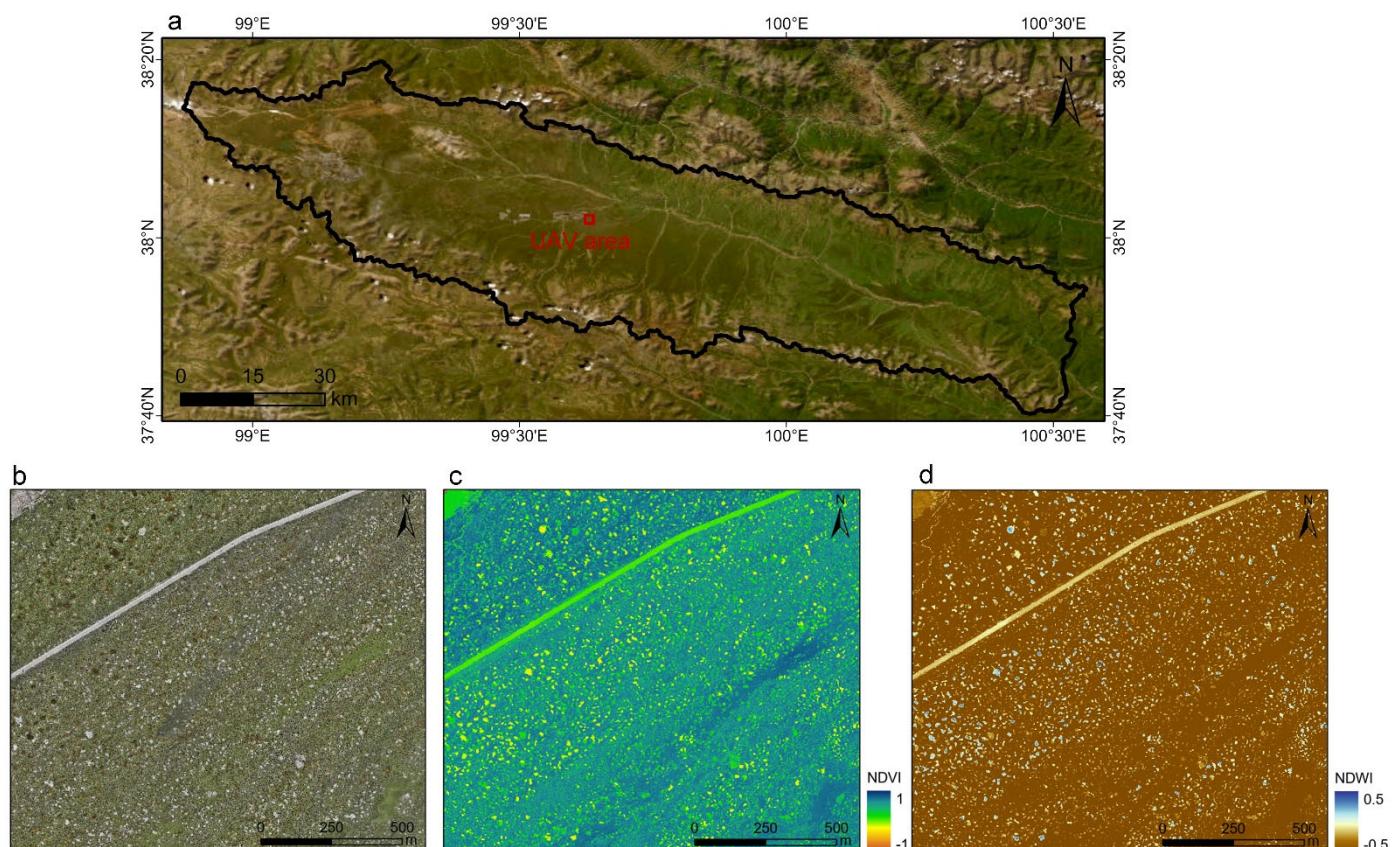

**Figure S11:** Comparison of ground surface characteristics at the P1 site near the Jiangcang open-pit mine on July 24, 1984 from Keyhole-9 data and on July 16, 2025 from UAV data.

**Figure S12:** Vertical deformation rate maps during different periods.

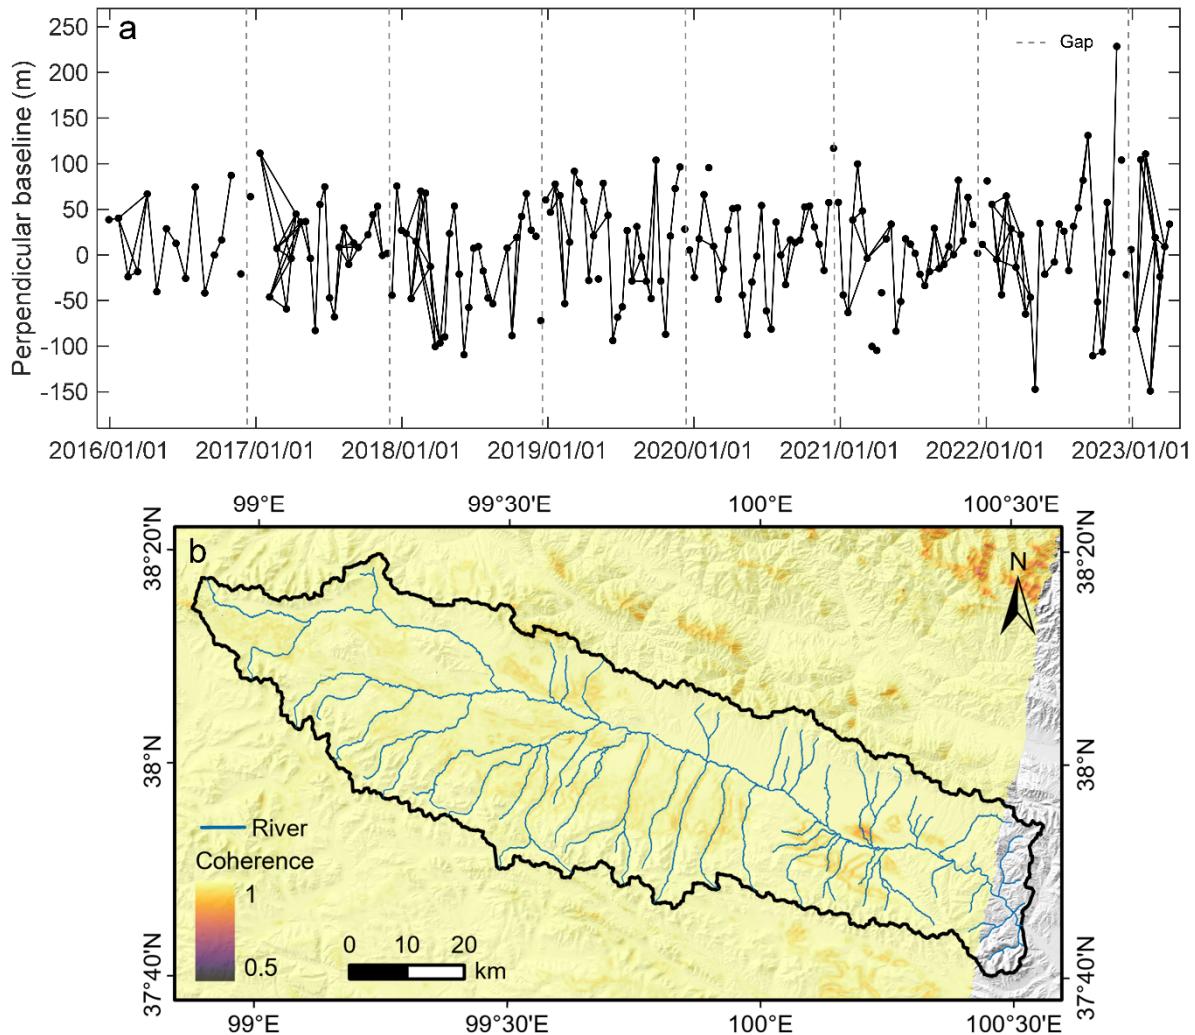

**Figure S13:** Vertical thaw-season deformation maps during different periods.

**Table S1** The information of interferograms obtained from ERS-2, Envisat, ALOS-1, and ALOS-2.

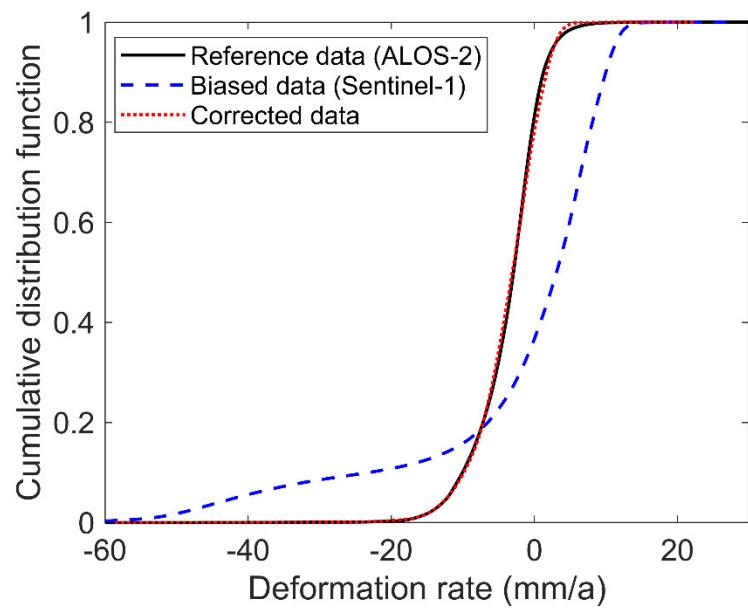

Satellite	Image 1 (dd/mm/yyyy)	Image 2 (dd/mm/yyyy)	Perpendicular baseline (m)	Time span (days)
ERS-2	19970428	19970602	98	35
	19970811	19980727	-239	350
Envisat	20031018	20051022	-435	735
ALOS-1	20070712	20071012	702	92
	20070712	20080714	-1053	368
	20070827	20090901	-853	736
	20070827	20100904	1225	1104
	20100720	20101020	481	92
	20190324	20200322	307	364
ALOS-2	20190519	20190714	-25	56
	20190714	20200322	386	252
	20200322	20210321	46	364
	20210321	20220320	-273	364

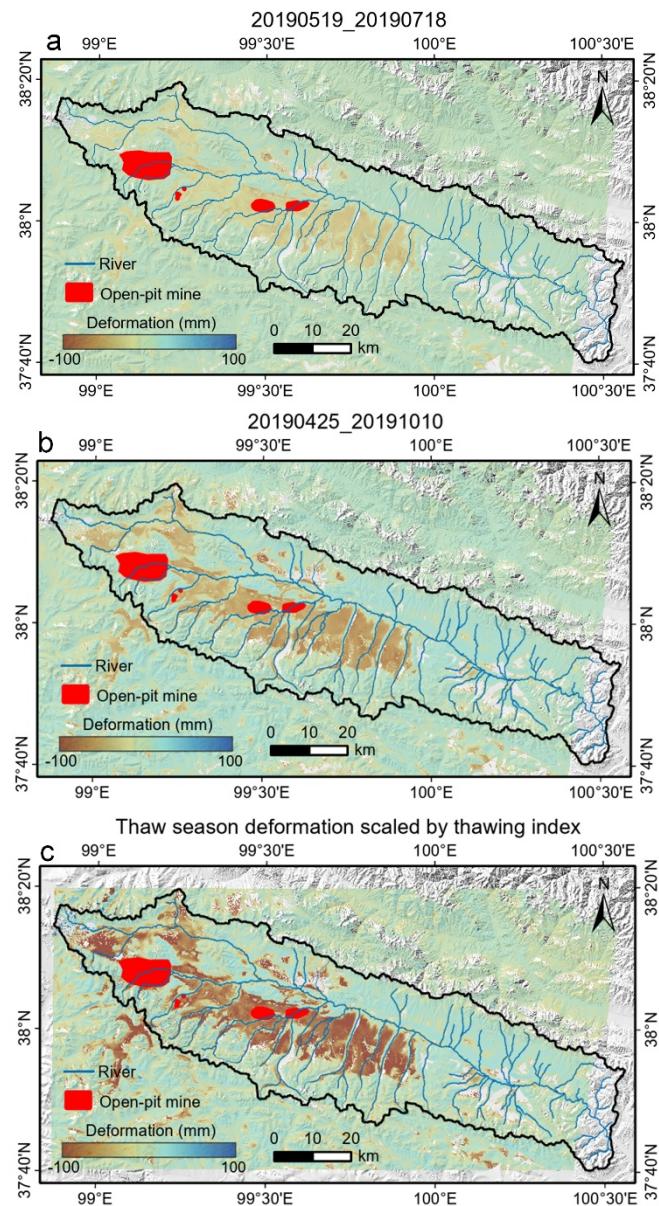

**Figure S1** Multispectral unmanned aerial vehicle (UAV) survey of surface conditions around the mining area: (a) survey location, (b) orthophoto, (c) normalized difference vegetation index (NDVI), and (d) normalized difference water index (NDWI). The optical basemap in panel (a) is from Esri | Powered by Esri.

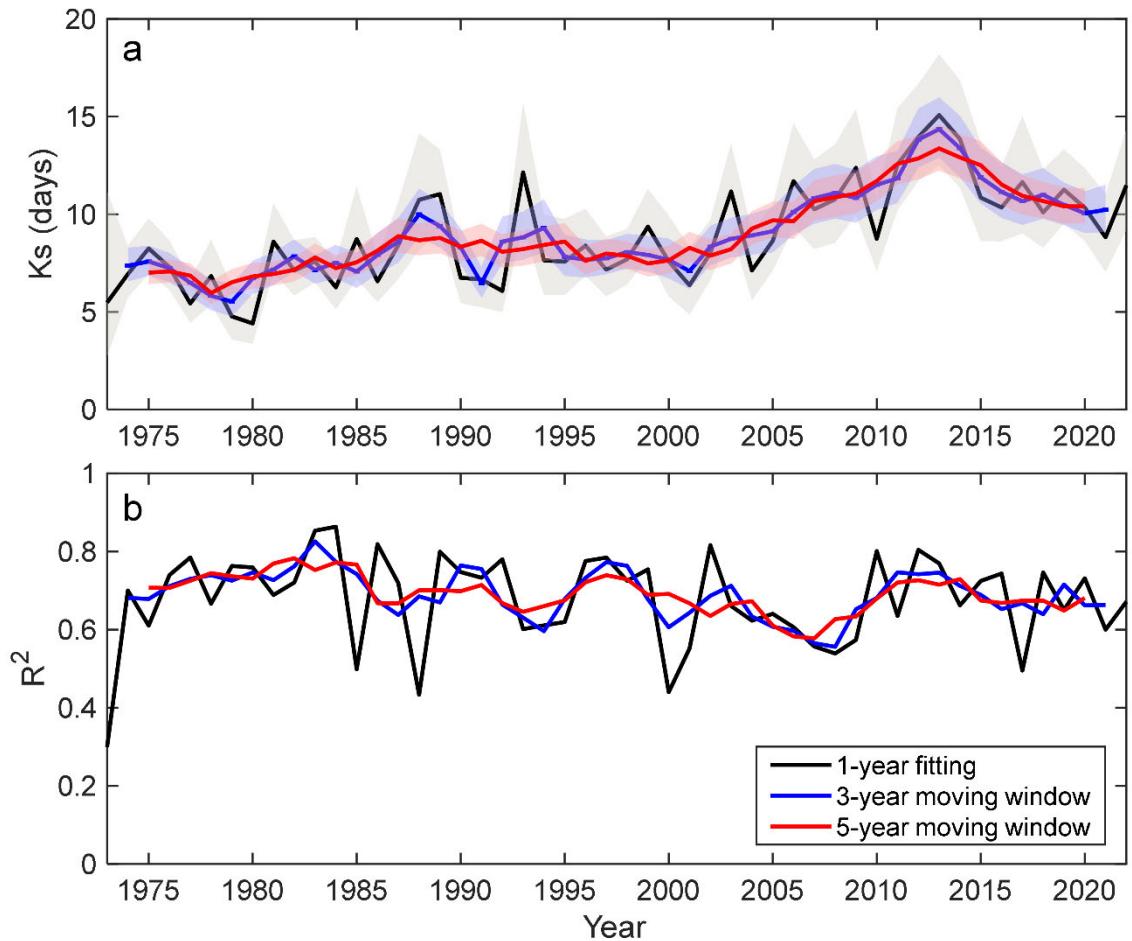

**Figure S2** Sentinel-1 interferogram network (a) and average spatial coherence (b).

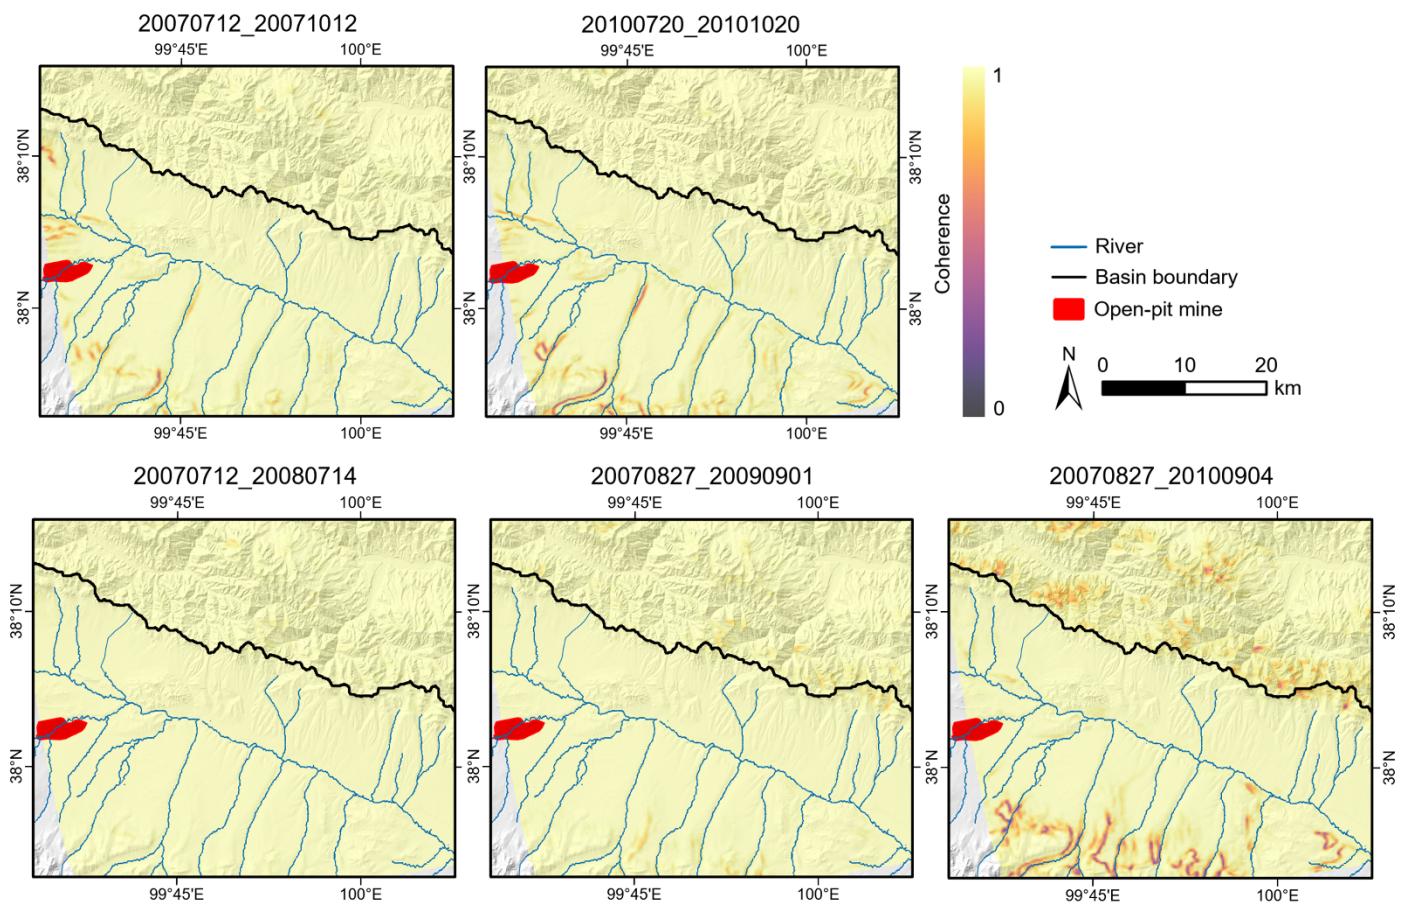

**Figure S3** Cumulative distribution function (CDF) matching between Sentinel-1 and ALOS-2 deformation rates. The initial Sentinel-1 deformation rates were corrected to align with the reference ALOS-2 data.

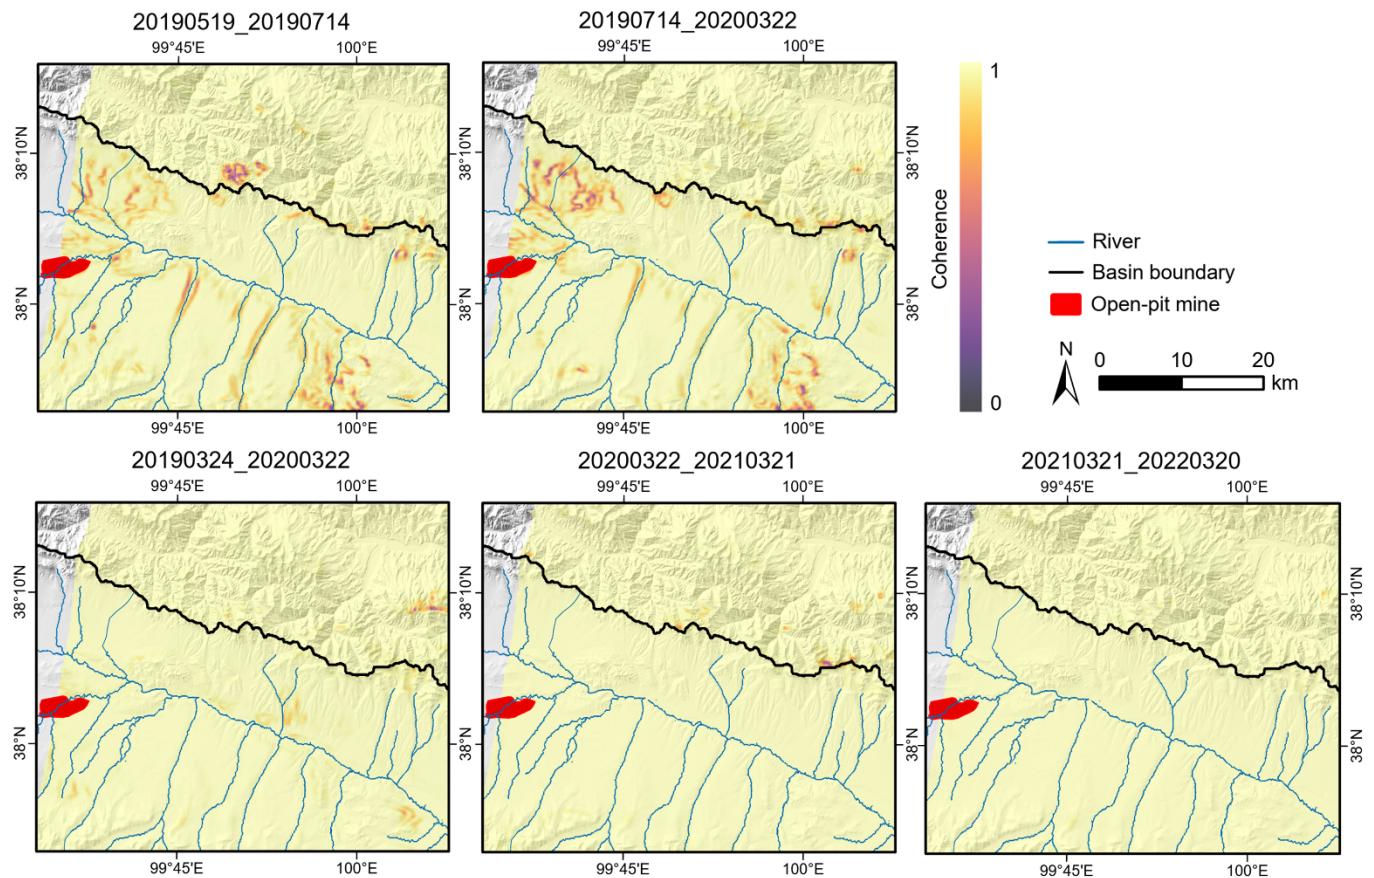

**Figure S4** Comparison between actual observed thaw-season deformation and thaw-season deformation scaled using the thawing index. (a) Partial-season deformation from May–July 2019 derived from the Sentinel-1 interferogram network. (b) Actual observed thaw-season deformation in 2019 from Sentinel-1. (c) Thaw-season deformation scaled using the thawing index.

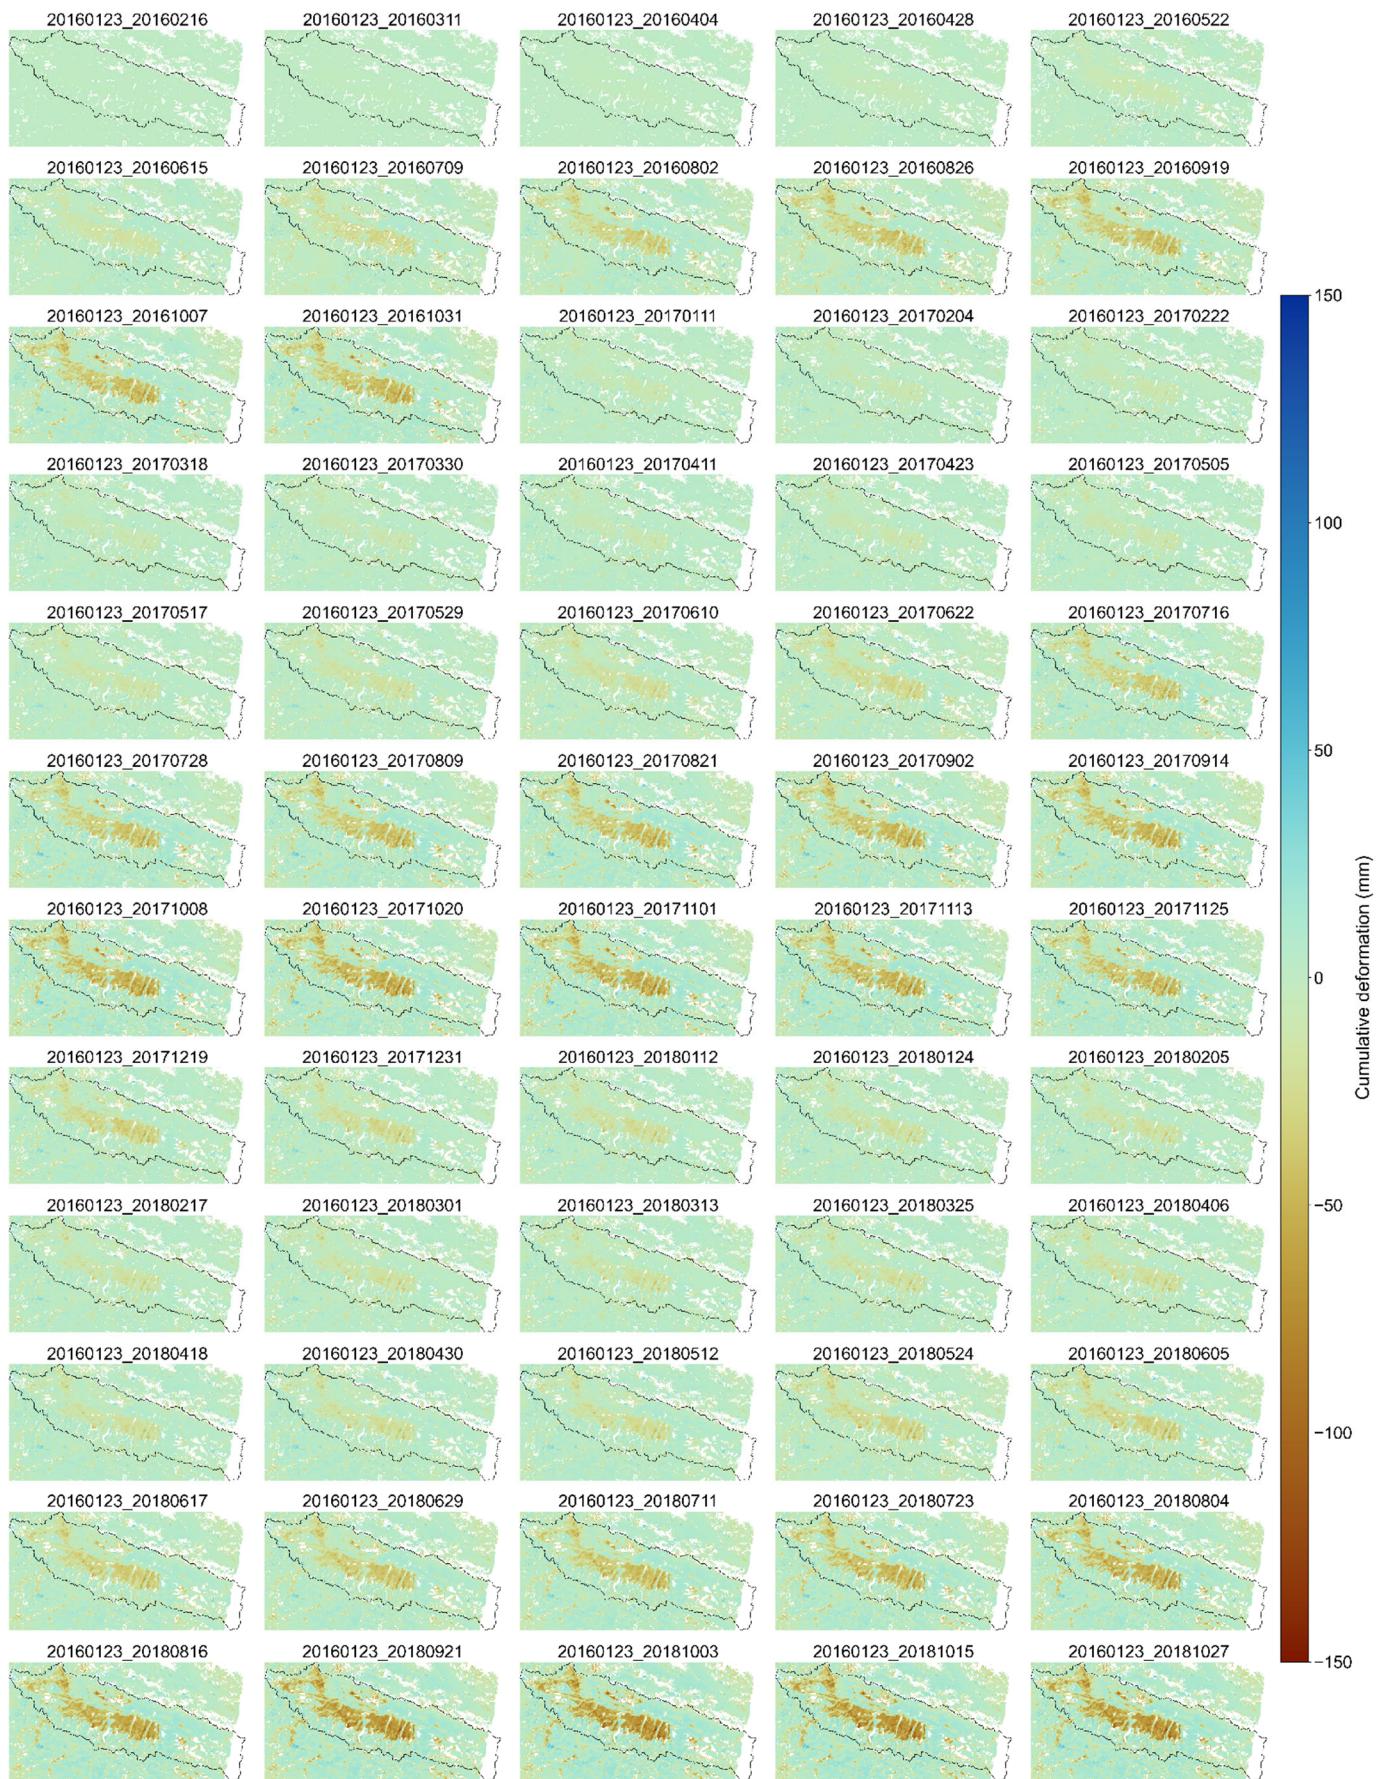

**Figure S5** Time series of streamflow recession time constant ( $K_s$ ) and model goodness-of-fit ( $R^2$ ). (a)  $K_s$  time series derived from 1-year fitting (black line), 3-year moving-window fitting (blue line), and 5-year moving-window fitting (red line), with shaded areas representing the 95% confidence intervals. (b) Goodness-of-fit ( $R^2$ ) of  $K_s$  estimates obtained using 1-year fitting (black line), 3-year moving-window fitting (blue line), and 5-year moving-window fitting (red line).

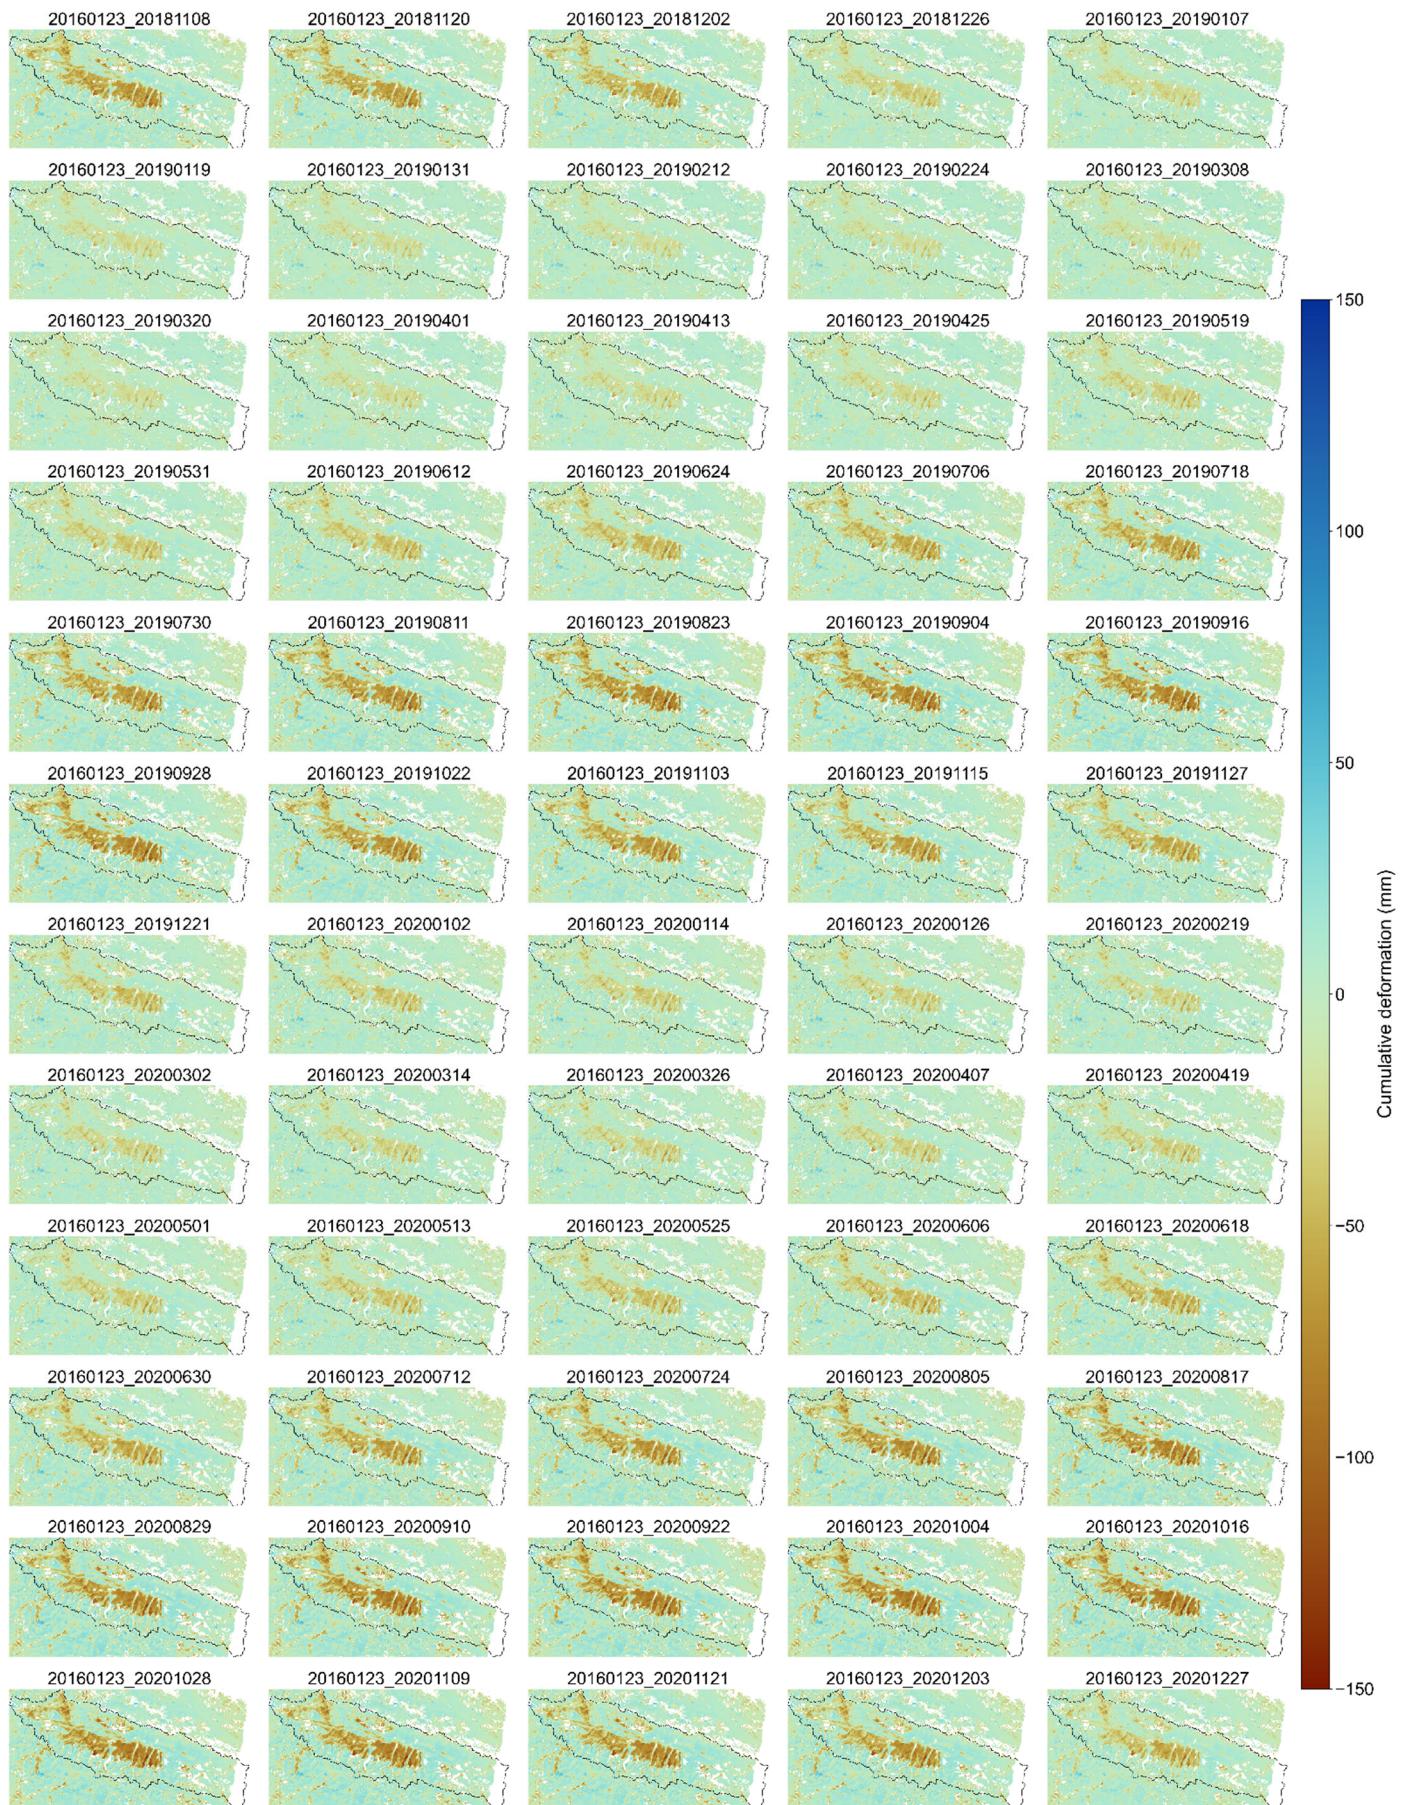

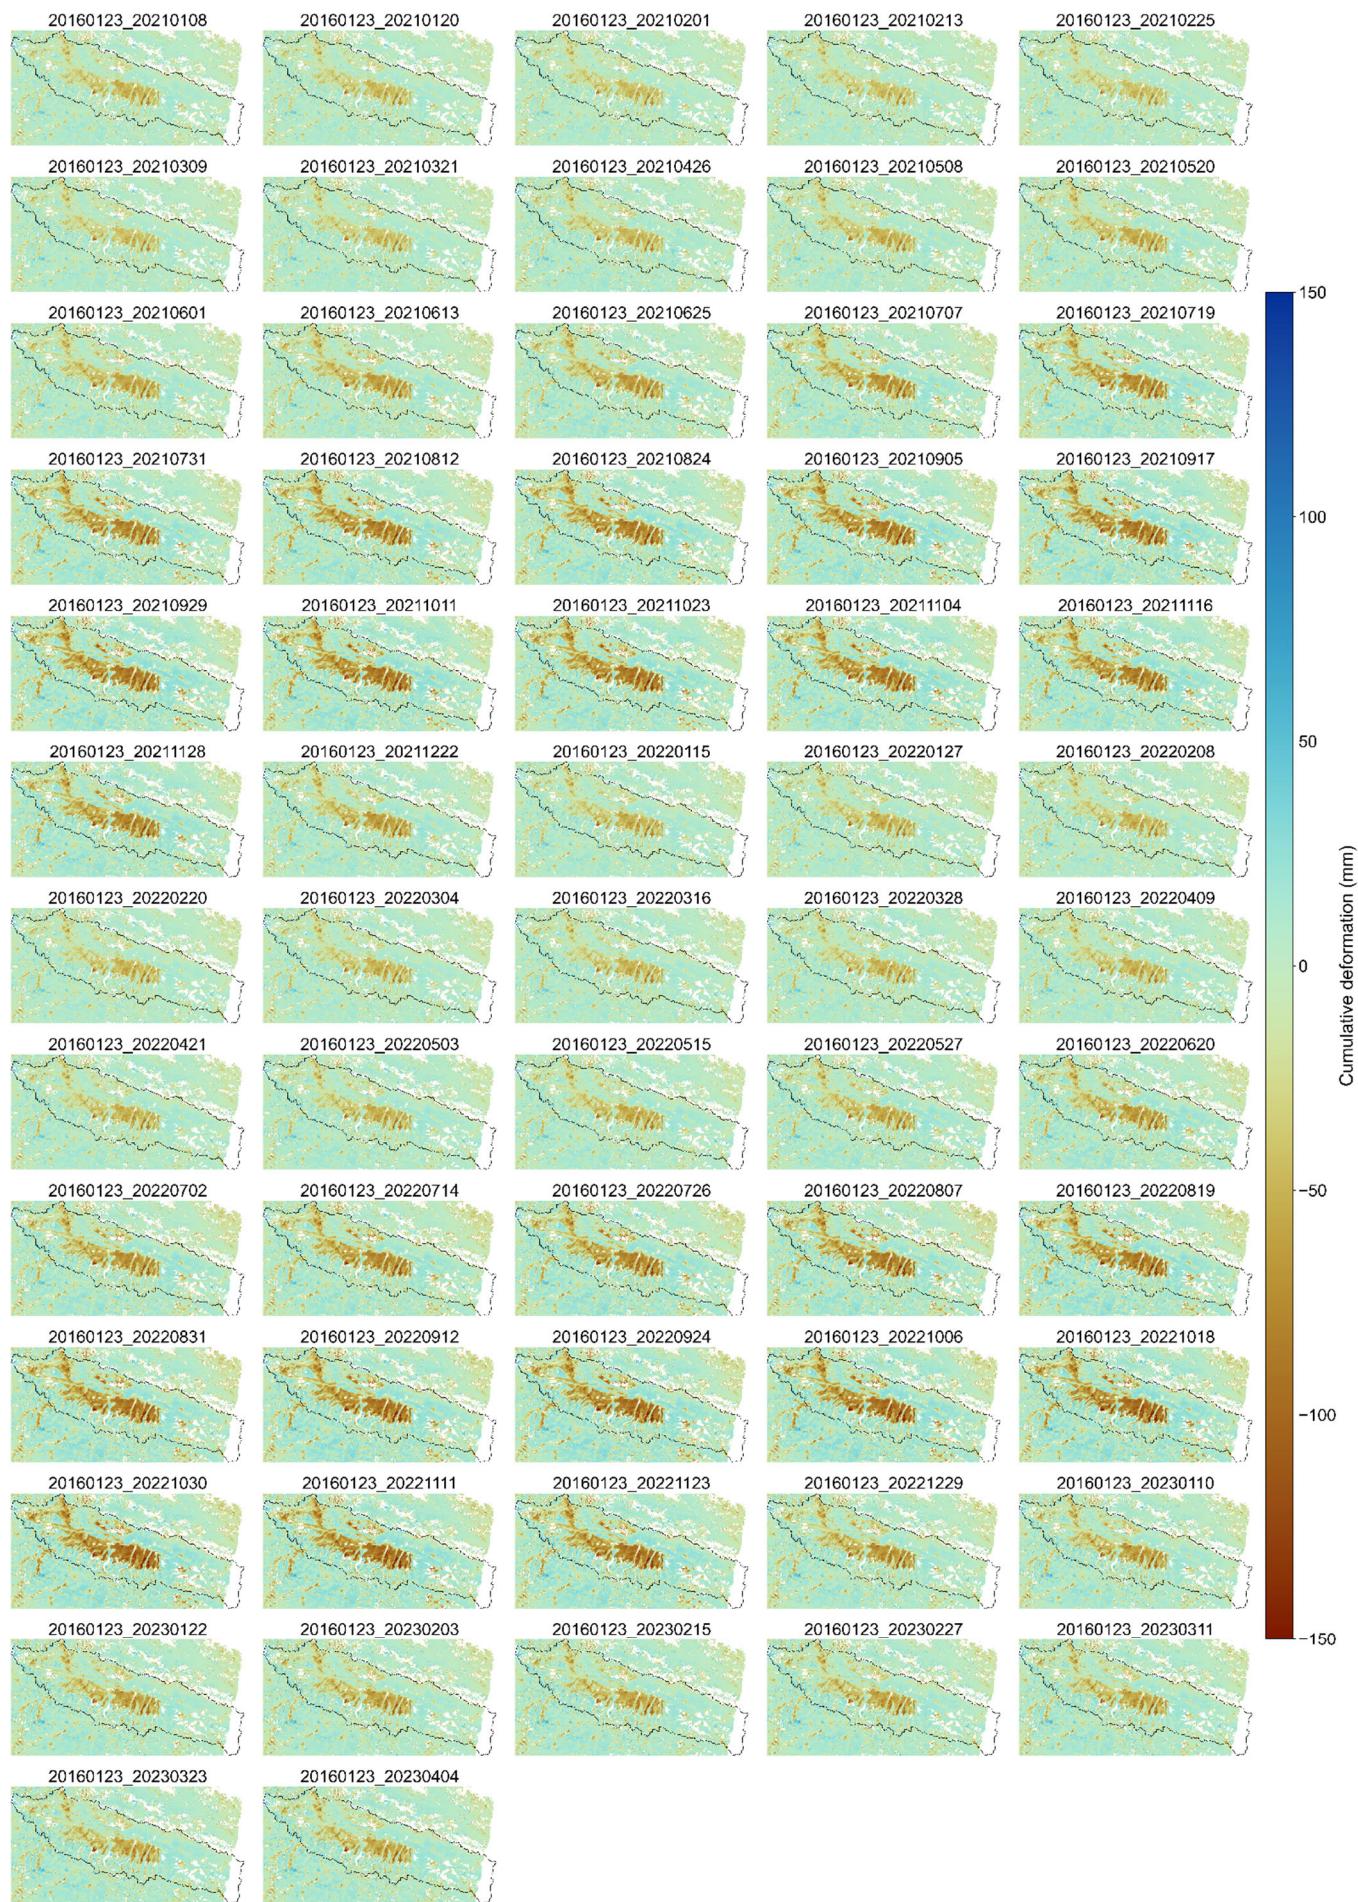

**Figure S6** The coherence maps of the interferograms from ALOS-1.

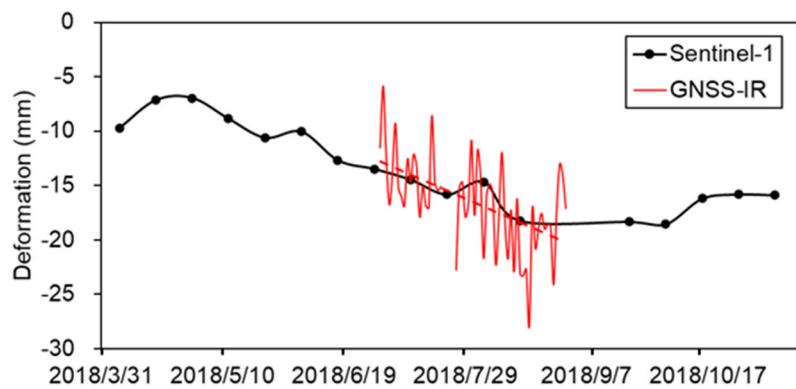

**Figure S7** The coherence maps of the interferograms from ALOS-2.

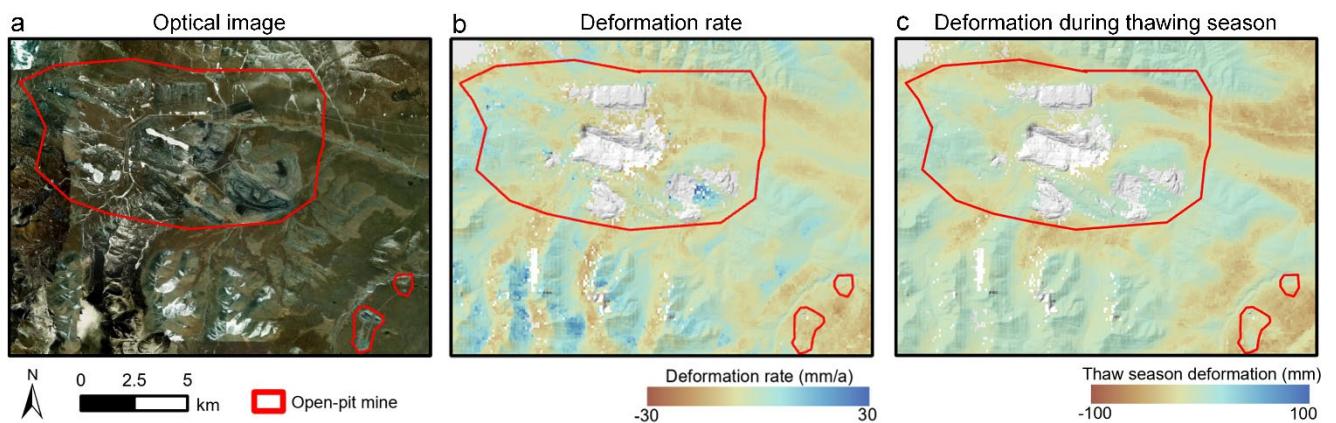

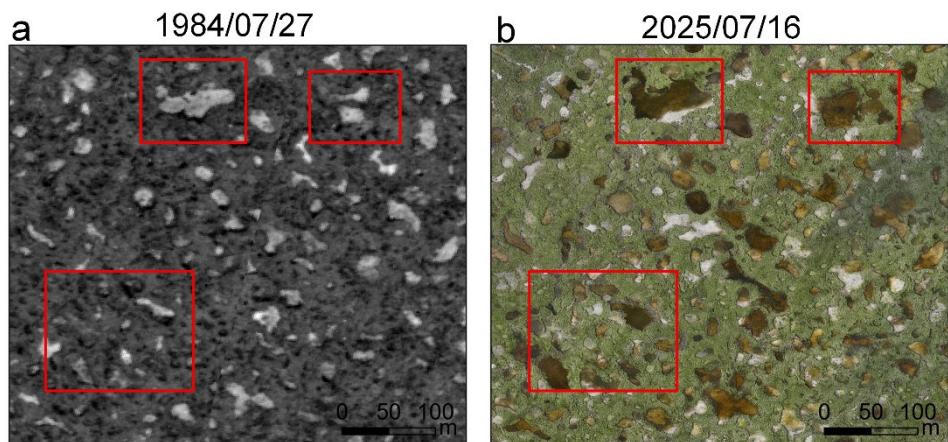

**Figure S8** Time series of cumulative surface deformation from 2016 to 2023, referenced to the first acquisition date.

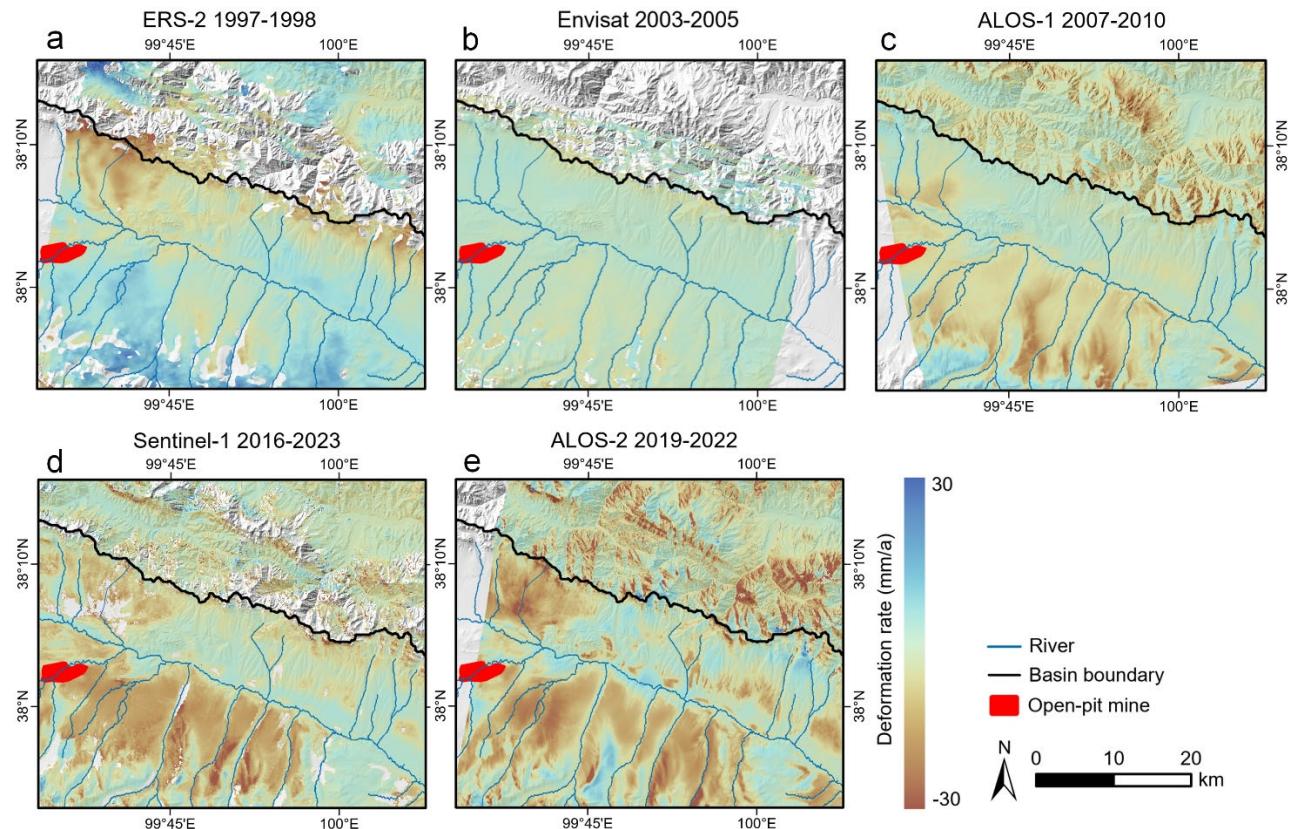

**Figure S9** Comparison between Sentinel-1 InSAR deformation time series and GNSS-IR (GNSS Interferometric Reflectometry) measurements (Zhang et al., 2021) at the Yakou station during the snow-free period in 2018.

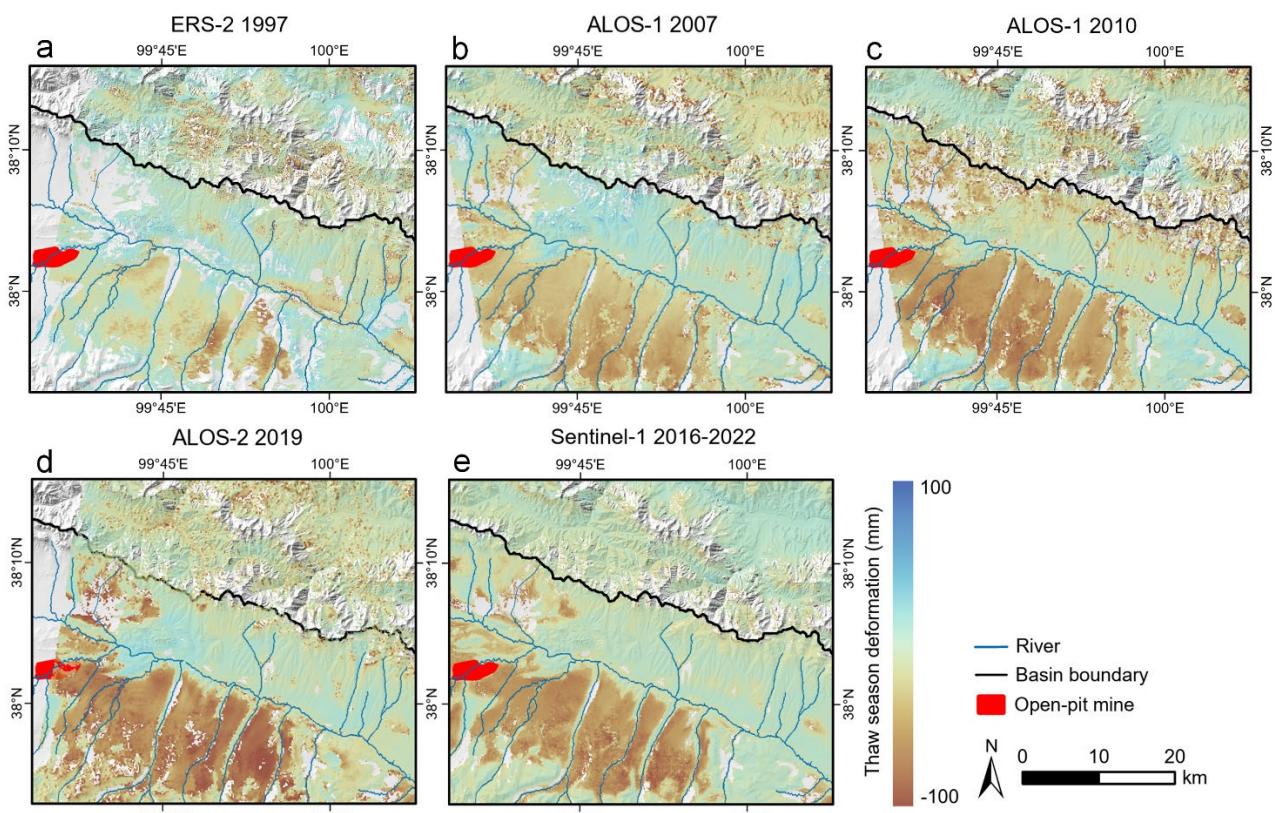

**Figure S10** (a) Optical image of the open-pit mine in the western study area from Esri | Powered by Esri. (b) Deformation trend and (c) thaw-season deformation in its surroundings.

**Figure S11** Comparison of ground surface characteristics at the P1 site near the Jiangcang open-pit mine on July 24, 1984 from Keyhole-9 data provided by the U.S. Geological Survey (a) and on July 16, 2025 from UAV data acquired by the authors (b).

**Figure S12** Vertical deformation rate maps during different periods derived from multi-source SAR data.

**Figure S13** Vertical thaw-season deformation maps during different periods derived from multi-source SAR data.
