

Review of Kanawade et al., “Observations of nanoparticle shrinkage phenomena”

20.5.2026

#### General

The manuscript has been improved from previous version in structure, content, and presentation, and is now ready for publication with some small technical revisions. I do not see a reason to ask for further reviewer comments.

#### Technical revisions

Line 228: Space between the words “events” and the reference is missing. Please also check for other such cases.

Line 238: The word “often” is misleading here, as neither in Dal Maso et al., 2005 nor in this study are do the DMD cases represent the majority of all NPF events observed. Please rephrase.

Line 358: The reference to Kivekäs et al., 2016 seems to be incorrect here.
