

Response to editor of manuscript

egusphere-2026-2092

“Thermohaline gradients and frontal regimes in the northwestern
Tropical Atlantic ”

by Napolitano et al.

Editor: Mario Hoppema

We thank the editor for their final review and technical corrections proposed. We addressed all the points raised and fixed the manuscript accordingly.

The only point that we kept unchanged was “L267 ... in equation (5)...”. Note that we use parenthetical referencing for every equation along the manuscript, so we kept it for consistency.

We look forward to publishing our manuscript in Ocean Science.
