

Figures for Comment #1 on Shirzaei et al.

Figure 1. Two images with 512-by-512 pixels over the same area and thus the same pixel spacing. Note that the image on the right has much lower spatial resolution due to low-pass filtering.

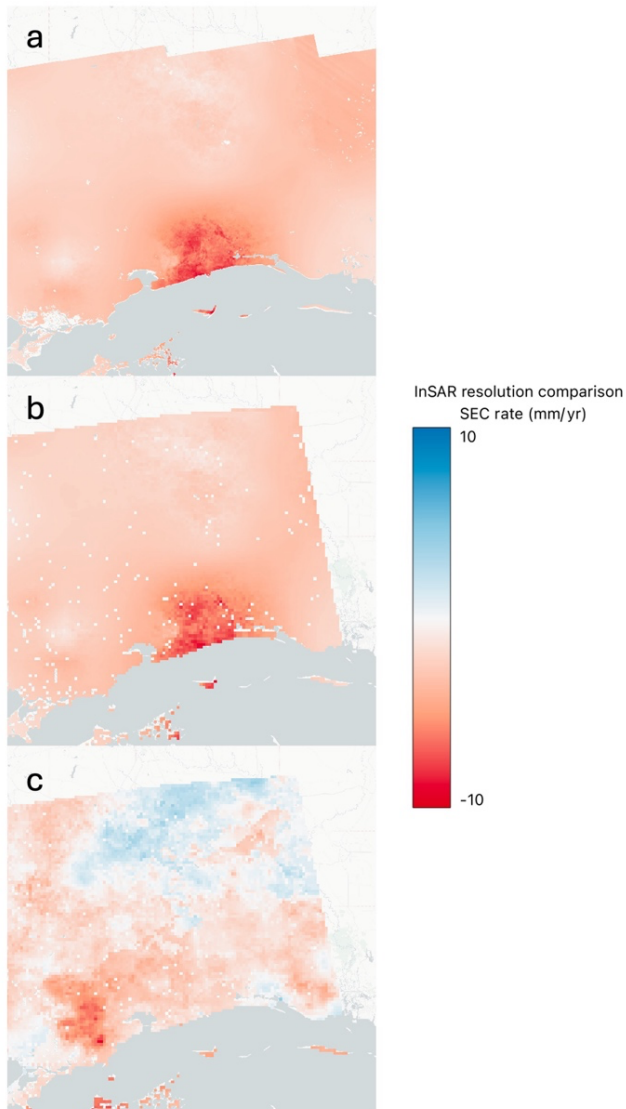

Figure 2 (a) The original O24 map at the 50 m pixel spacing centered on the Mississippi Coast near Biloxi. (b) The down-sampled O24 map at 1 km pixel spacing. Because the original O24 map is spatially smooth, down-sampling does not lead to substantial information loss. (c) The original W24 map at 1 km spatial resolution for the same area.
