Supplementary Table S1. Macronutrient concentrations. Initial (T0) and final (T24) concentrations of macronutrients: nitrate/nitrate (NO_x) and phosphate, following 24 h PDMPO incubation of *Leptocylindrus danicus* strains in response to temperature at each light treatment. Data represent the mean of four biological replicates ± SD.

35 **Supplementary Figure S1 | Strain morphology.** Micrographs of *Leptocylindrus danicus* strains used in the current study. The left column row shows strains grown under 100 $\mu\text{mol photons m}^{-2} \text{s}^{-1}$, and right column shows strains grown under 55 $\mu\text{mol photons m}^{-2} \text{s}^{-1}$ (A, B Coffs Harbour, C, D Forster, E, F Maroubra and G, H Twofold Bay strains). Black scale bar represents 10 μm .
