

p. 16, ll. 304-306:

The positive trend observed for both EXP1 and EXP2, could this be related to the reduction in ODSs and the associated expected ozone recovery?

I suggest that the authors provide a brief comment or explanation in the text.

Yes, you are right. Thank for your suggestion. We have added it.

“This positive trend corresponds to the changes in EESC, providing further evidence that the reduction of ODS is driving the expected recovery of the Antarctic ozone layer.” (L315-317)

Thank you.
