

Dear Editor,

sorry for bothering you. We found a typo in the proofs of our manuscript "Brief communication: A century of landslide records in Calabria, southern Italy, looking for changes and trends through a dynamic analysis" (egusphere-2026-621).

Since the typo regards the threshold equations it needs your approval to be corrected by the typesetter.

In Table 1, we need to replace the all "+" signs with "±" signs, both in normal and superscript text.

The presence of the "+" signs is a mistake. All threshold must be in accordance with Equation 1, which indeed has the "±" sign:  $E = (\alpha \pm \Delta\alpha) \cdot D^{(\gamma \pm \Delta\gamma)}$ .

Hope you can accept this change.

Best regards,

Stefano Luigi Gariano Olga Petrucci
