

We thank the Associate Editor for the careful assessment and for pointing out the remaining notation inconsistencies in the mathematical formulation.

In the revised manuscript, the notation has been fully harmonized throughout the paper. In particular:

- the distinction between time-domain and frequency-domain quantities has been made fully consistent;
- the previously unnumbered intermediate frequency-domain equation has now been properly numbered;
- notation for the feedback force, subscripts, superscripts, and italic/upright mathematical symbols has been systematically revised and unified across the manuscript;
- all equation references and numbering have been checked accordingly.
