

Dear ACP Editorial Team,

Thank you very much for correctly pointing out that color schemes in Figure 2 and 3 were not adequate for readers with color vision deficiencies.

We have changed the color scheme to one that overcomes this problem. Because the color scheme we originally used was coordinated with Figure 1, we also changed the color of some of the lines in the drawings. In addition, the same issue was found in Figure 9 (which showed similar data as Figure 2), and Figure 8, which used red and green together in some panels (we changed from green to orange).

The color scheme is now more suitable for readers with color vision deficiencies. To reflect these color changes, we adapted the text at a few places in the text, where we, for example, changed the word “black” to “dark blue” and “green” to “orange”. No other changes were made to the main text.

We also updated the current affiliations of some of the co-authors.

Sincerely,

Jochen Stutz
